Spotting the difference is easy, because the burning of acid indigestion is totally different from the bloating and cramping of trapped wind. Now you can address this difference by stocking Setlers Antacid **and** new Setlers Wind-eze, a simethicone based remedy to gently and safely disperse trapped wind. And spotting the difference in sales will be even easier, because since the launch of Setlers Wind-eze the whole Setlers brand has soared. A lift-off which our plasticine pal Alan, the star of both nationwide TV commercials, is continuing to support. So stock up on new Setlers Wind-eze and Setlers Antacid then sit back and spot the double difference in your sales.

Two good reasons why sales are growing

Contains calcium carbonate

Product Information. SETLERS ANTACID. Presentation: Chewable tablets containing calcium carbonate Ph. Eur. 500mg available in peppermint, spearmint and fruit flavours. Uses: Relief from indigestion and heartburn. Dosage and administration: Adults, children over 12 years and the elderly: Suck or chew one or two tablets as required, up to a maximum of 16 tablets a day. Contra-indications, warnings etc: Hypercalcaemia, hyperparathyroidism, hypercalciuria, nephrolithiasis and Zollinger-Ellison syndrome. Patients on low phosphate diets, cardiac glycosides or with impaired renal function should not take Setlers Antacid Tablets. Antacids of this type are known to decrease the absorption of concomitantly administered drugs. If symptoms persist consult your doctor. Undesirable effects: May cause constitution and flatulence. Legal category: GSL. Cost inclusive of VAT: £0.55 (12's), £1.39 (36's), £2.49 (96's). Product licence number: Peppermint flavour: 0036/0075, Spearmint flavour: 0036/0076, Fruit flavours: 12063/0013. Product licence holder: Stafford-Miller Ltd., Welwyn Garden City, Herts. AL7 3SP. Date of preparation: January 1997.

Product Information. SETLERS WIND-EZE. Presentation: Simethicone USP 125mg in a white tablet. Dosage and administration: 1:2 tablets to be chewed before swallowing, 3 or 4 times daily or as required after meals. Not recommended for children under 12 years. Uses: Antiflatulent defoaming agent for the symptomatic relief of flatulence, wind pains, bloating, abdominal distension and other symptoms associated with gastrointestinal gas. Precautions: Should not be used by patients with known hypersensitivity to any of the ingredients. Do not use for longer than 14 days. Seek medical advice if symptoms persist or worsen. Legal category: GSL: Cost inclusive of VAT: £1.55 (10's), £2.99 (30's). Product licence number: PL 0036/0084. Product licence holder: Stafford-Miller Ltd., Welwyn Garden City, Herts. AL7 3SP. Date of preparation: November 1996.

Contains simethicone USP

s the patient pack initiative destined to become a white elephant? At present, pharmacists have to labour with a half-baked system that is Lhalfway to full implementation. Manufacturers and the Medicines Control Agency have invested time and money in the initiative, and are two-thirds of the way through a three-year schedule. This is a long-term programme, and to find that the Government, albeit now of a different colour, is contemplating a volte-face. is alarming. Manufacturers see the PPI as a way to address the patient information requirements laid upon them by the EC Pharmaceutical Directive. To find that the health minister "is now considering alternative means of implementing the Directive", when it is due to come into effect in UK law at the beginning of 1998, is ridiculous! There is no hint, either, of what alternatives Mr Milburn has in mind. Interesting, though, is the fact that the letter setting out his concerns was leaked to the press before copies arrived at the ABPI.

It all boils down to money, despite protestations that the proposals that have been worked up are "excessively complicated" (here, incidentally, the minister cites "the discretion proposed for pharmacists to 'round' their interpretation of the doctor's prescription to the nearest available pack, and the resulting added complexity to the PPA systems". Perhaps the minister is unaware of the ludicrous 'cut and snip' rules which effectively dismantle many of the packs?). Quite how the DoH expects the generics industry, for one, to meet the cost of patient packs without putting up prices, and hence the drugs bill, is something of a mystery, although that cost might be recouped by halting the container allowance currently paid to pharmacy contractors. The DoH is going to have to explain more fully how it reckons the bill will reach \$60-\$70 million during the transition phases.

London supports Patel

C&D understands several local pharmaceutical committees in the London area are supporting Hemant Patel's proposals for a review of the structure and functions of the Pharmaceutical Services Negotiating Committee.

Croydon LPC wants next year's PSNC elections to be held after, rather than before, the LPC conference has had a chance to debate restructuring and future strategy. Together with Lambeth, Southwark & Lewisham LPC, Croydon contractors have decided it is not worth the money attending the conference dinner in March to which MPs are invited.

Andrew McCoig, Croydon LPC's secretary, has written to PSNC saying he is concerned its current constitution does not justly represent contractors. "I do not believe we can go into the next century and beyond with a so-called democratic committee

of which 40 per cent is nominated [rather than elected]. Would it not be fair to assume that group or block voting is the normal procedure on contentious issues? I cannot accept that this could possibly reflect our best interests on every occasion.

"Change must be on the agenda at PSNC for it to survive after the latest pay imposition. I am not directing any particular angst against individuals ... we simply believe you must wake up to the reality of the catharsis that is now overdue." Mr McCoig adds that some form of outside advice "may be able to give us the redirection we need and an overhaul of the strategic thinking necessary".

He continues: "The lobbying and entertainment of MPs has singularly failed to yield any form of empathy for community pharmacy, other than a continuous diet of lip service. We now know, much to our emotional cost, that a similar exercise targeted at shadow government has also lamentably failed, as the present incumbents are maintaining the bullying status of the previous administration."

Mr McCoig told *C&D* it cost \$500 for his LPC representatives to attend last year's dinner – "and, being close to London, they had the minimum of travelling expenses and didn't need hotels". But he urged other LPCs who decided to opt out of the dinner to give PSNC plenty of notice.

Lambeth, Southwark & Lewisham LPC believes it is more productive – and less expensive – to hold its own local event with MPs and health authority representatives.

Mr Patel told C&D this week he was pleased with the level of support in the London area.

Burr responds to Society request to publish Puxon report

Former Royal Pharmaceutical Society Council member Andrew Burr says he finds it "extraordinary" that the Society has indicated it will encourage him to publish the Puxon report.

In a statement issued on Monday, Mr Burr says he "finds it extraordinary that a professional body should ask one of its members to publish any report he received in his capacity as an elected member of its Council". The Society made its decision at last week's Council meeting (see p16).

"Mr Burr has always observed the confidential status of Council documents and, having resigned from Council, in no way wishes to renege on that commitment to his chosen profession. It would be quite inappropriate for Mr Burr to publish a report that was commissioned by the Society and is the Society's own report," continues the statement.

Mr Burr considers the report to be inaccurate and believes parts of it exceed the jurisdiction set out in the terms of reference agreed by the Council.

The internal inquiry followed allegations of the conduct of Council members and Society staff (*C&D* October 4, p5). Mr Burr resigned at the October Council meeting after being censured in the report.

The Council decided at the time that the report should not be published and no further public statement should be made on this matter. The statement continues: "It is for the Society, not Mr Burr, to publish the report that found he had conducted himself with grave impropriety in relation to or in respect of Practice Resource Systems."

• Council agreed last week to make an appointment to fill the vacancy following Mr Burr's resignation. Nominations will be taken at the Council meeting on December 2.

 Mr Burr has announced that he will be standing for Council in next year's election in May.

NPA cancels NW conference through lack of support

The National Pharmaceutical Association is asking members to let it know why there was insufficient support for its North West Conference, which has had to be cancelled.

The conference, scheduled for Sunday, received applications to attend from only 30 members out of 1,000. The decision to cancel was made last Friday. This is the first time the conference has had to be cancelled in its 11-year history through lack of attendees. It

is normally well subscribed.

NPA head of public relations Veronica Wray is mystified as to why there was so little interest. Among keynote speakers was to be NHS Executive principal pharmacist Dianne Kennard. Ms Wray thought that with the current feelings in the profession about the remuneration imposition "this would be an ideal opportunity to put those points".

"The silence is deafening. Please tell us what you want, we are not mind readers," said Ms Wray. "Contact the PR department at the NPA. We do need to know what the problem is."

The conference was to be sponsored by L Rowlands.

Last month, a conference organised by the Bath and West Region of the Royal Pharmaceutical Society was almost cancelled, after only 20 people out of about 2,000 in the region had returned application forms one week before the conference.

MPs are 'quite prolific users of primary care'

MPs can be expected to have informed opinions about primary care, because "they are quite prolific users".

This is according to a survey of 166 backbench MPs' views on healthcare. The survey shows 71 per cent of the MPs had visited a pharmacy—for—a—prescription medicine in the past year.

The survey, 'Hard Choices?', was published on Tuesday by the Harris Research Centre and Market Access from the Harris Parliamentary Opinion Panel.

It says 61 per cent of Labour MPs want to see explicit rationing rules set down to concentrate healthcare revenues on particular patient groups. Of options given on raising extra revenue, the prescription charge was the least defended, with only 55 per cent opposed to the levy being raised, compared to 42 per cent in favour.

'Hard Choices' is available from Market Access, 7 The Sanctuary, Parliament Square, London SW1P 3JS, price \$75.

Australia approves CMI payments

Australian pharmacists are to be entitled to payment for providing information about medicines to consumers (CMI), says *Pharmacy Trade* magazine.

After a two-year investigation, the Pharmaceutical Benefits Remuneration Tribunal has recommended to the Australian health minister that community pharmacists be paid for CMI. The tribunal accepted the argument that CMI adds to the pharmacist's counselling role, but is not at present considered in the remuneration fee. It also agreed that provision of CMI extends pharmacists' legal liabilities.

The Pharmacy Guild of Australia is to discuss a dollar value for the service with the health minister.

Queen's pharmacists win £1.1m

The School of Pharmacy at Queen's University, Belfast, has received a \$1.1 million grant from a trust set up by the founder of Galen.

The grant, believed to be one of the largest to academic pharmacists in the UK, will be used to establish a chair in bio-medicinal chemistry and to support two lectureships and research. Galen chairman Dr Allen McClay set up the independent Allen J McClay Trust in May this year and made a personal donation of 6 per cent of Galen's ordinary shares following the company's flotation on the London Stock Exchange in July.

The Trust aims to support research in the Schools of Pharmacy and Chemistry at Queen's.

Health minister Alan Milburn has expressed concerns over the patient pack initiative (see p28-29)

Society in joint NHS bids

The Royal Pharmaceutical Society is involved in three bids for NHS funding for national sentinel audits. Council heard at this month's meeting that the NHS Executive had invited all the royal medical colleges to bid for funding and had indicated that it was looking for a multi-disciplinary approach.

The Society is taking the lead in a bid to audit missing or inadequate dosage instructions with medicines in primary care, and is supported by the Royal College of General Practitioners and the Royal College of Physicians.

The Society has also been invited by the RCP to join in its bid on evidence-based prescribing for older people. Other participants are the British Geriatrics Society, King's College Hospital, the RCGP and the Royal College of Nursing. If the bid is successful, a pharmacist will be recruited to co-ordinate the audit and the Society will be a member of the audit's national advisory group.

The third bid is being led by the Royal College of Psychiatrists and relates to the management of violence in clinical settings. Other participants include the RCN and the College of Occupational Therapists. The Society would join a working party to oversee the project.

John Ferguson, Society secretary and registrar, said the degree of collaboration was encouraging. News of the success or otherwise of the bids would be available at the end of November.

Cosmetics testing on animals banned

The Government has secured an end to cosmetic product testing on animals, two weeks after the industry agreed to discuss a possible voluntary ban.

The three organisations that held licences have agreed to stop animal testing of finished products and have returned all the licences to the Home Office for amendment. As the HO has no intention of issuing new licences, this amounts to a complete ban.

HO minister Lord Williams said last week he was delighted that agreement was reached so speedily: "A voluntary ban was the quickest way to achieve a ban, as legal advice confirmed that the existing law did not allow us to revoke the licences."

Marion Kelly, director of the Cosmetic Toiletry and Perfumery Association, explained on Tuesday that the three licence holders were contract laboratories which had been testing finished products from overseas. UK companies and multinationals in the UK had not carried out finished product testing on animals for several years. Testing of new cosmetic ingredients was still permissible, she said.

Lord Williams met the independent Animal Procedures Committee last week to discuss a proposed ban on the safety testing of ingredients "intended primarily for vanity products". Other proposals being discussed with the committee include:

- a requirement that all organisations licensed to carry out procedures on animals set up welfare committees to scrutinise the ethics of proposed work, try to reduce the numbers of animals used, minimise suffering and improve care and accommodation
- putting pressure on national and international regulatory bodies to review their requirements that animals are needed in human safety testing of ingredients and products
- encouraging the use of animal alternatives by working with

European partners and the European centre for the validation of alternative methods, based in Italy, to establish a European database of alternative methods

continuing the requirement that wild-caught primates should be used only where there are no

that wild-caught primates should be used only where there are no alternative tests or suitable captivity-bred animals, and where the likely benefit exceptionally justifies their use. The only example at present is baboons used in heart transplant research that cannot be bred in captivity.

Lord Williams said that all licence applications were examined on a case by case basis and, before allowing tests to go ahead, the HO had to be satisfied that there were no alternatives and that any suffering to animals was outweighed by the potential benefit to humans.

"These decisions are not taken lightly but, until alternative tests can be developed, some animal testing is necessary to guarantee the safety of products," he said.

Drug recall

A class 2 drug alert for Roferon-A (interferon alfa-2a [rbe]) prefilled syringes 3MIU and 6MIU was issued by the MCA on Tuesday. Manufacturer Roche Products is recalling the following batches due to stability testing problems: Roferon-A Prefilled Syringes 3MIU in 0.5ml, PL: 00031/0485, batch numbers B002, B004, B005, with respective expiry dates of October, November and December, 1998; and Roferon-A Prefilled Syringes 6MIU in 0.5ml, PI 00031/0487, BN B003, expiry March, 1999.

Scottish stats ...

There were 4,703,925 scripts dispensed in Scotland in July, 4,695,553 by chemist contractors, at a total cost to the Exchequer of £45,782,985. For chemist contractors, the ingredient cost per script was 874.73p with a professional allowance of 39.13p and oncost of 0.16p. The gross total per script was 1,019.19p or 96,277p net. The average CD fees cost per script was 5.15p.

... and NI stats

There were 1,594,805 items dispensed from 948,536 script forms in Northern Ireland in August. The ingredient cost was £16.19 million (£15.15m net). The discount £1.034m, with oncost and other payments totalling £2.564m. The gross cost was £17.72m (£17.21m net). Gross cost per script was £11.1087 with ingredient cost £10.1496. The net ingredient cost per script was £9.5012.

Acknowledgement

The conference report 'Future challenges for hospital pharmacy' (*C&D* November 1, p18) came from an event at the RPSGB's headquarters organised by *The Hospital Pharmacist*.

Registration exam results improve

Of the 109 UK graduates sitting the Royal Pharmaceutical Society's registration exam in October, 92 passed and 17 failed, it was announced last week. This compares with the 86 passes and 64 fails among the 150 who sat the exam in October, 1996.

Five of this year's fails were first attempts and 12 were second attempts. The overall mean marks were 71.7 per cent in the closed book paper, 75.1 per cent in the open book paper and 73.1 per cent overall, compared with figures of 65.3, 73.5 and 69.4 per cent last year.

Surrey's most vulnerable pharmacies to be surveyed

A research company and Aston University have been contracted to review vulnerable pharmacies in Surrey.

Kingston & Richmond Health Authority has asked MEL Research, working with Aston's Pharmacy Practice Group, 'to develop business and marketing plans for community pharmacies considered to be at risk.

MEL is using an audit of pharmacy services carried out by the health authority to identify the vulnerable pharmacies. A survey

of pharmacies and 1,000 local residents on what future developments they would like to see in community pharmacy services will also be taken.

Among the issues facing pharmacies the consultants will be addressing is the supply of dressings from a multi-fundholding practice and polyclinics, says MEL's health and social care research centre manager, Stacey Sadler.

The project runs until March next year, when it is hoped the

results will be published. Among the recommendations for future developments MEL hopes to make are:

- developing community pharmacy as an integrated aspect of primary care
- looking at innovative models of pharmacy practice such as multi-pharmacy business and health centre consortia
- identifying an action plan to optimise community pharmaceutical services to most efficiently and effectively meet local need.

Government could be planning to put a cap on GP prescription expenditure

The Government may have plans to curb the number of prescriptions that GPs can write under proposals in its forthcoming White Paper.

The plans, outlined in the Sunday Times and the Mail on Sunday, include a ceiling on the sum GPs are allowed to spend on prescribed drugs each year.

Money to cover prescriptions will apparently be drawn from local commissioning groups. GPs will have to compete with local hospitals and other health services for money.

"The White Paper is being drafted. There is a lot of speculation, but we cannot comment until publication," says a Department of Health spokesman.

The Royal Pharmaceutical Society's president, Peter Curphey, questioned whether prescription curbing is the right way to control the expenditure on medicines within the NHS.

"There are pilot schemes on repeat dispensing which should demonstrate the potential for very substantial savings in costs of medicines if applied nationally," he said.

"Some doctors and pharmacists are already working together successfully to control costs through prescribing review and practice formularies."

Pharmaceutical Services Negotiating Committee general secretary Stephen Axon points out: "The number of prescriptions has no bearing on the overall costs of the drugs bill."

• Health ministers are looking at setting up a committee to draw up a national NHS formulary, says a report in *GP* magazine. The committee would also examine drug cost-effectiveness.

Farm medicines proposals issued

Proposals for a voluntary Code of Practice on the Effective Use of Animal Medicines on Farms have been issued by the Veterinary Medicines Directorate.

It is proposed that the Code of Practice should sit alongside guidelines (on operator safety when using veterinary medicines on farms) being drawn up by the Health & Safety Executive.

Comments on the proposals should be sent by December 8 to Phil Davies at the VMD, Woodham Lane, New Haw, Addlestone, Surrey KT15 3NB.

Electronic vision for the New Year?

The first electronic links between pharmacies and GP surgeries will occur early in 1998, Practice Resource Systems' professional services director, Andrew Burr, has confidently predicted.

In terms of funding, resources will become available from health authorities, Government and industry, he thought, but future revenue would be more dependent upon the type and quality of the professional services provided by an individual pharmacy, rather than simply on the number of prescription items dispensed.

Mr Burr made his predictions at the National Association of Fundholding Practices Conference in Harrogate last Thursday. He had been asked to speak on pharmacy's role in medicine management and helping GP practices manage their prescribing as part of the session 'Delivering the vision – leading edge development in primary care'.

He discussed how GP surgeries could outpost services to community pharmacies, such as diagnostic screening and health promotion activities, and gave

Andrew Burr, professional services director of PRS

examples of successful schemes. In one, local pharmacies invit-

In one, local pharmacies inviting patients from neighbouring surgeries for *Helicobacter pylori* testing had an 83 per cent attendance rate, with a similar number then being treated by their GP for the condition after being referred back to the surgery. Follow-up questionnaires had indicated that 65 per cent of the patients would prefer to have been screened in the pharmacy rather than the GP surgery if given the choice.

In another model using hypertension, he discussed how GP clinics tended to pre-select patients who wish, rather than need, to attend. Using practice nurses and community pharmacists to monitor health parameters, such as blood pressure, compliance and adverse effects, the prescriber could monitor hypertensive patients. By consolidating the data from pharmacies and surgeries, it was possible to decide who should visit the hypertension clinic.

However, the major drawback with such models is that they are still 'paperclip exercises', and that the real solution would be to harness the power of information technology.

With GP commissioning, Mr Burr forecasts that the GP will prescribe a total care programme. Practitioners will set the monitoring parameters which would be accessed by accredited health centres including pharmacies. Accessibility of pharmacies means the pharmacist would play a major role.

Moreover, he predicted that through electronic links to GP surgeries, the community pharmacist would be able to book appointments for patients on the pharmacist's referral.

RPSGB president writes to Alan Milburn over remuneration

Royal Pharmaceutical Society president Peter Curphey has written on behalf of the Council to health minister Alan Milburn over the remuneration imposition.

In a letter sent on Tuesday, Mr Curphey expresses concern over the 2.4 per cent increase, which he says represents a reduction in remuneration because it is well below the rate of cost inflation faced by pharmacy owners. In addition, it is linked to a 2.8 per cent increase in prescription numbers, which he believes many contractors will not be able to match.

While recognising that the Pharmaceutical Services Negotiating Committee is responsible for negotiating, he says that the Society has a vital interest in maintaining a distribution of pharmaceutical services.

"There is no doubt that the imposition of a below inflation rate 'increase' will place additional economic pressures on pharmacy contractors, many of whom have already been shown to be vulnerable, not least because of the government's harsh policy on remuneration over the past few years," he writes.

Three out of four headaches are Tension Headaches

Here's why you should recommend Syndol

Syndol is the UK No 1 selling brand specifically formulated for Tension Headaches.

From October, we are launching a £1million national advertising and support campaign, aimed at adding even more pharmacy customers to Syndol's already loyal customer base. Millions of sufferers will learn that:

- 3 out of 4 headaches are Tension Headaches.*
- 67% of sufferers who used Syndol felt initial relief in 15 minutes** and 97% within 30 minutes,**
- Syndol contains three powerful ingredients two to relieve the pain, one to relax the muscular tension.

Imagine the tension if you're not stocked up with Syndol!

Helps Stop Tension Headaches Fast

Paracetamol. Codeine Phosphate, Doxylamine Succinate, Caffeine.

Syndol Product Information. Presentation: Each lablet contains Paracetamot BP 450mg. Codeine Phosphate BP 10mg. Doxylamine Succinate NF 5mg. Calterine BP 30mg. Indications: First the freatment of mild pain to moderate pain and as an informer citied of headache, including muscle contraction or tension headache, impraine, neutraligia, toothache, sore throat, dysmenorrhea, muscular and meumatic aches and pains and post operative analgesia following surgical or dental procedures. Dosage and Administration. Adults and children over 12 years. Contraindications. Warmings, etc. Contraindications of surgicial parameters of the procedure of the procedure

Topical Reflections

Should I just follow caveat emptor?

Modern medicine has achieved great advances in prolonging life, but, perversely, as longevity has increased so has public concern over the apparent inability of conventional treatments to deliver a complementary improvement in the quality of life.

The spectre of debilitating old age has focused consumers' thoughts on the maintenance of good health and this, in turn, has produced an explosion of dietary supplements, all offering the tantalising promise of eternal youth, but at a price! A month's supply of 'Memory Lane' sells at £29.95, Arthrovite at £24.99 and the new Converlean is a snip at £59.97.

Details of all these products have recently been carried in Counterpoints and, despite my humble location, I am receiving an ever-increasing demand. Good for business, but I am still concerned. My professional conservatism prevents me from recommending products that rely on hearsay evidence for their efficacy. 'Safe' they may be, profitable they definitely are, but do they work?

But are some licensed medicines any better? Do topical non-steroidal gels work? Is homoeopathy all in the mind? With an imposed cut in NHS remuneration, am I worrying unnecessarily? Perhaps, after all, I should accede to public pressure and

sell whatever the law allows. The public are entitled to make their own decisions. Perhaps a simple 'buyer beware' is all that I should require.

Something to make the NHSE pull its hair out

Minoxidil was the first drug to be licensed for hair re-growth and, as Regaine, is now a nice little over the counter earner. However, if a report on BBC's 'Face Value' (November 5) is true, then a good head of hair could soon be available on the NHS.

One of the reported effects of finasteride is to cause regrowth of hair in male pattern baldness, but, unlike minoxidil which is used topically, finasteride is an oral preparation already extensively prescribed for benign prostatic hyperplasia.

Merck Sharp & Dohme has indicated its intention to apply for an extension to the existing licence which, if granted, could open the floodgates to its cosmetic use. Even if two marketing trade names were used (one of which was blacklisted), the high incidence of generic prescribing would preclude any differentiation at the point of dispensing.

As a potential user of finasteride for its current indications, I would find a full head of hair a welcome bonus, but for the NHSE the prospect of male hair transplant clinics going out of business at the taxpayers' expense must be an uncomfortable prospect.

Sound logic

The Government has stirred up a hornets' nest with its recent U-turn to exempt Formula One motor racing from the sponsorship ban on tobacco companies. I am sure its reasons are firmly based on economic reality, but it still leaves a sour taste in my mouth when this decision is put in the context of the recently reported increase in teenage smoking.

However, the health secretary's primary concern must be to maximise resources for the NHS. Smoking kills. By encouraging more people to smoke, and therefore die younger, he can redistribute the enormous costs of funding medical care in the elderly!

Dunkirk spirit lives on

Tony Brignull, advertising consultant, mourns the passing of independent choice in the High Street (*The Guardian*, November 6). For too long most commentators have revelled in the concept of 'the big multiple is beautiful', but it is only now that the consequence of this choice is dawning that voices are being raised in opposition.

To many retailers this conversion comes too late, but Mr Brignull will be pleased to learn the Dunkirk spirit still survives among independent community pharmacists. I know to my cost the programmed attitude of many consumers who come to me only as a last resort, but I am ever-optimistic and if attitudes do genuinely change, then the local pharmacy could be seen as the start of the revival of independent retailing, and not as its last redoubt.

NI smoking cessation scheme extended

Northern Ireland's smoking cessation scheme is to be extended in the new year to target employees at the top 100 businesses in the province.

The Northern Ireland Committee for Postgraduate Pharmaceutical Education and Training will be launching the initiative at the end of this year to take advantage of New Year resolutions.

Employers are to be asked to send employees to pharmacists for advice, and employees will be given information leaflets which contain a list of local pharmacies.

A nurse practitioner, Aishlinn Drummond, has been appointed for one year to co-ordinate the campaign.

Besides increasing numbers of patients into the study, Ms Drummond is hoping to recruit new pharmacists, which offers payment of \$180 for recruiting and monitoring 12 smokers. Pharmacists already participating will also be able to enroll a further 12 patients.

"This project is important to pharmacy in Northern Ireland and we need the continued suppor from community pharmacists to make it successful," says Ms Drummond.

Further information is available from Ms Drummond at Queen's University, Belfast, on 01232 272032 or 272007.

NHS complementary medicine still limited

Complementary medicine in the NHS is still at a 'grass roots' level, but future increased use is being planned.

However, there are four main barriers to further usage, including lack of awareness, lack of funding, concern about practitioner competence and lack of evidence for efficacy.

These are the findings of the NHS Confederation, discussed in its new research paper, 'Complementary medicine in the NHS – managing the issues'.

There is also concern that there is a lack of coherent strategy for the introduction of complementary medicine into the NHS. "At present, this is often in the hands of individual healthcare professionals who need access to more and better information about CM research," says NHS Confederation project officer Yvonne Mouncer.

The report, priced \$15 for members and \$22 for non-members, is available by written order only from the NHS Confederation, Birmingham Research Park, Vincent Drive, Birmingham B15 2SO

The most recommended lozenge in pharmacy - because you say so. And say so.

It's no coincidence that when it comes to sore throats, Merocaine is the most recommended throat lozenge¹ - because nothing has been clinically proven to relieve sore throats faster.²

And thanks to you, your customers have found the effective relief they need.

And say so.

It's the powerful, dual action combination of Benzocaine, a strong local anaesthetic to relieve pain, together with Cetylpyridinium Chloride (CPC), a fast-acting anti-bacterial agent, which produces such impressive results. In fact, Merocaine's powerful antimicrobial efficacy is clinically proven to achieve a 99% reduction of the most common oral pathogens within 5 minutes.

For severe sore throats, Merocaine should be your number one recommendation, because Merocaine provides fast, effective relief for your customers - and a good Profit on Return for you.

Merocaine Cetylpyridinium Chloride, Benzocaine.
For sore throats, make Merocaine your No1 choice.

Anti-malarial travel pack

Zeneca Pharma will introduce a Paludrine/Avloclor Anti-Malarial Travel Pack from December 1. Each blister contains two chloroquine tablets and 14 proguanil tablets (a week's supply). Basic NHS price is £8.79. Zeneca Pharma. Tel: 01625 712712.

Bambec transfers to Astra

The distribution of Bambec (bambuterol) Tablets has transferred from Novex Pharma to Astra Pharmaceuticals, the product licence holder. All orders, and service and delivery enquiries should be referred to Astra customer services.

Astra Pharmaceuticals Ltd. Tel: 01536 461146.

Raxar approved in Europe

Glaxo Wellcome has received European approval for Raxar (grepafloxacin), a new oral fluoroquinolone antibiotic. It is indicated for once-daily treatment of certain respiratory tract infections, gonorrhoea and urethritis/cervicitis caused by chlamydia. A launch date is yet to be set. The licence holder is Otsuka Pharmaceutical of Japan. Glaxo Wellcome UK Ltd. Tel: 0181 990 9000.

Omron improves nebuliser kit with a CX compressor

Omron has improved its CX nebuliser kit with the introduction of the CX compressor to replace the C08 compressor.

The new compressor is more efficient and durable than the previous C08 model, making it suitable for severe asthmatics and those with obstructive airways diseases being treated at home. The C08 compressor has been discontinued.

The Onuron CX nebuliser produces ultra-tine particles (5.2mcg compared to 7.8mcg with the

C08) which reach further into the patient's lungs. Compliance is also improved because of shorter treatment times – typically five minutes with an aerosol output of 400mg per minute.

The device can be easily disassembled for disinfecting in boiling water. It also comes with a mask and mouthpiece, and five filters (one year's supply). The manufacturer's warranty is three years.

Hutchings Healthcare Ltd. Tel: 01273 495033.

BPH video with Flomax MR

A free book, video and cassette on benign prostatic hyperplasia are being offered to patients on Flomax MR (tamsulosin). Flomax MR packs will carry a flash to remind users of the availability of the patient support programme. Yamanouchi Pharma Ltd. Tel: 01932 345535.

New portfolio for Florizel

Florizel has taken over the sale and supply of the following brands from Hoechst Marion Roussel: Sofradex Ear/Eye Drops and Ointment; Surgam 200mg and 300mg Tablets; Soframycin Eye Drops and Ointment; Dimetriose Capsules; and Merbentyl Syrup, and 10mg and 20mg Tablets. Florizel livery will be adopted once current stock is exhausted. Orders should be placed with the products' distributor Distriphar and medical information enquiries with:

Florizel Ltd. Tel: 01462 436156.

Vectavir on Dental Tariff

Vectavir (penciclovir) Cream, the topical anti-viral cold sore treatment, has been added to November's Dental Drug Tariff. Smithkline Beecham Pharmaceuticals. Tel: 01707 325111.

MEDICAL MATTERS

Men no longer grin and bear it

Men no longer grin and bear it when it comes to their health, but are demanding greater access to services and information.

A new Gallup/Men's llealth Matters survey has shown that more than half of men now visit their general practitioner within a week of having a medical problem. This compares to a 1994 survey, which found that men with benign prostate enlargement waited an average of four years before consulting a doctor.

Men also want equality with women when it comes to health screening services. Almost three-quarters wanted men's health clinics to be set up and two-thirds wanted access to a confidential helpline. Regular check-ups and screening in such clinics could help reduce prostate and testicular cancer, which kill 9,000 and 130 British men respectively every year.

A new Men's Health Matters campaign has been launched on the back of these results, supported by an educational grant from Yamanouchi Pharma. It includes an Adviceline (0181 995 4448) and a series of consumer leaflets. The first, 'Waterworks', focuses on prostate problems. Copies can be obtained by sending an SAE to Men's Health Matters, Blythe Hall, 100 Blythe Road, London W14 0HB.

New early intervention scheme for dyslexia

A new scheme which encourages healthcare professionals to intervene early in dyslexia has been launched by the British Dyslexia Association.

The programme aims to train healthcare professionals, such as health visitors, speech and language therapists, playgroup leaders and nursery workers, to identify shortfalls in speech, language and literacy in pre-school children. It is being run with the help of AFASIC (the national organisation for children with speech impairment) and Glaxo Wellcome.

• A BDA survey of 102 local education authority policies on special education needs found that many dyslexic children fail to receive help until they are at least four years behind their peers.

Lower respiratory tract illness and patient pressure

Patients who go to their GP with acute lower respiratory symptoms often believe that infection is the problem and antibiotics the answer.

A report published in the *British Medical Journal* found that such expectations have a significant influence on prescribing, even when their doctor judged that antibiotics were not indicated.

Seventy-six GPs and 790 patients took part in the study to assess patients' views and expec-

tations when they consult their doctor with acute lower respiratory symptoms, and the influence that these views have on management.

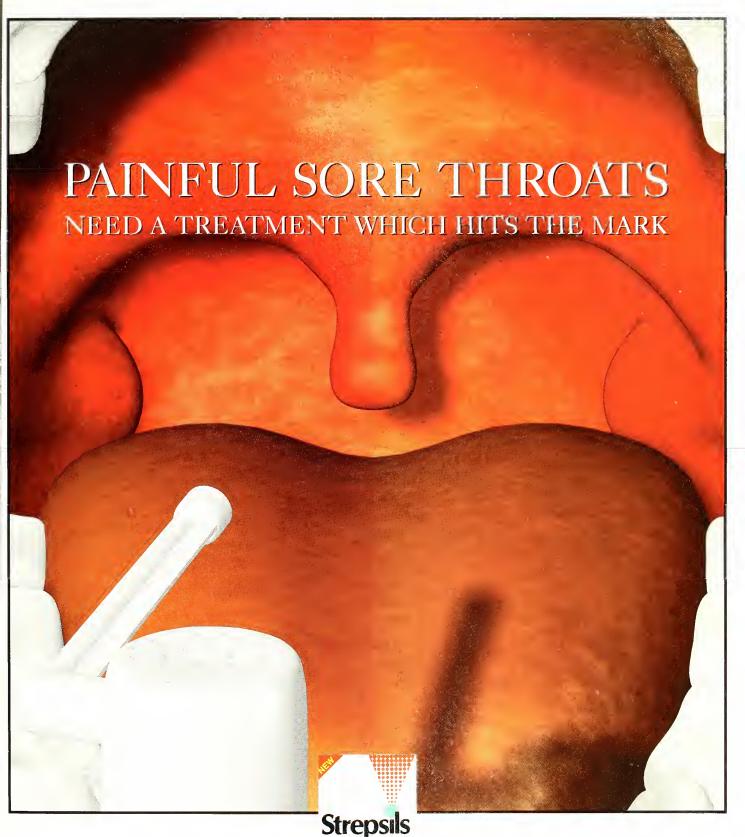

Most patients (84 per cent) thought that their symptoms were caused by an infection and 83 per cent believed that antibiotics would help. Over 70 per cent of patients wanted and expected to receive a prescription for antibiotics.

Of the 587 patients who received an antibiotic, 146

requested one. Severity of symptoms did not relate to wanting antibiotics. For those prescribed antibiotics doctors thought that they were definitely or probably indicated in 455 cases, and probably not or not indicated in 126.

Patient pressure contributed to doctors' decisions to prescribe an antibiotic in about a quarter of cases. GPs considered that antibiotics were definitely indicated in just 1 per cent of the group in whom patient pressure influenced the prescribing decision.

CHEMIST & DRUGGIST 15 NOVEMBER 1997

When it comes to relieving painful sore throats, Strepsils Direct Action Spray is one of the most powerful recommendations you can make. Its anaesthetic spray provides DIRECT ACTION SPRAY

effective relief direct to the point of pain.
And with the trusted Strepsils name, your customers instinctively know it is a treatment they can trust.

Contains lidocaine hydrochloride

Clinically proven anaesthetic treatment to relieve painful, sore throats

Strepsils Direct Action. Presentation: Red liquid containing Lidocaine Hydrochloride, Ph. Eur. (lignocaine) 2.6mg per spray. Also contains: Purified Water, Sorbitol Solution. Flavourings (Levomenthol Peppermint, Aniseed), Sodium Citrate, Saccharin, Alcohol, Carmoisine Edicol (E122). Indications: Symptomatic relief of severe sore thoats. Flu Monitor 2

Summary

The first flu virus of the season – an influenza A(H1N1) virus – has been isolated, indicating sporadic cases are occurring in the community. Consultations with GPs for flu-like illnesses remain at baseline levels and other indicators of flu activity remain at low levels.

Activity in England and Wales

GP consultations in the RCGP scheme in England for flu and flu-like illness remain within baseline levels at a provisional rate of 33 per 100,000 for the week ending November 2, slightly up from last

week. In the spotter GP scheme operated in Wales, the consultation rate was 2.7 per 100,000, also a little higher than last week but still within baseline levels. The flu virus which has been isolated is antigenically similar to the A/Bayern/7/95-like strain which is included in the vaccine for 1997/98.

Influenza activity elsewhere ...

Flu activity remains low on the Continent, with sporadic influenza A and B infections being reported from a number of countries. Influenza A infections were confirmed in nine states in the US by the end of October. Canada has also seen sporadic outbreaks, with 26 children being hospitalised in Toronto.

Data from the PHLS (Communicable Disease Surveillance Centre, Virus Reference Division, CDSC Welsh Unit), the RCGP and Scottish Centre for Infection and Environmental Health

Garlic: state of the art for the heart

Your questions answered

How do Kwai garlic products differ from other garlic brands? All Kwai tablets are standardised to release an optimum effective amount of allicin, garlic's prime heart care agent. They are manufactured in a state of the art factory to the exacting standards of quality control demanded by healthcare professionals, who have undertaken extensive research on the brand.

How much research has been published on Kwai?

Over 170 papers have been published to date in respected scientific journals from around the world. The research has investigated a link between an intake of at least 300mg of Kwai daily and helping to maintain a healthy heart and circulation. Much of the research has been double-blind, placebo-controlled.

Is this research valid for other garlic supplements, too?

No. No other manufacturer of a garlic product has invested as much as Lichtwer Pharma, the maker of Kwai. Furthermore, meaningful research is only possible with a standardised product with guaranteed activity and effectiveness. Many experts now agree that a garlic product must have the potential to produce the compounds allicin and ajoene *in vivo* if it is to provide heart care benefits.

How do Kwai Once-A-Day and Kwai ACE differ?

Both provide 300mg of standardised garlic powder (equivalent to half a raw clove). In addition to this, Kwai ACE provides the antioxidant vitamins A, C and E for extra convenience.

Kwai Original 100mg tablets can be bought in packs of 100, 200 and 560 tablets; Kwai Once-A-Day and Kwai ACE come in 30- und 100-tablet packs, from £4.95 rsp. For turther information call Chemist Brokers on 01705 219900.

New obligation for needles

The Royal Pharmaceutical Society's Council has approved an additional obligation relating to drug misuse.

At its meeting last week, Council agreed the obligation under Principle 1 of the Code of Ethics, concerning supply of equipment to drug misusers other than as part of needle and syringe exchange schemes.

The obligation reads: "Only in exceptional circumstances should pharmacists supply clean injecting equipment for drug misusers if the pharmacy has no arrangements for taking back contaminated equipment."

Standards for professional services Council adopted new or revised standards for six professional services, together with practice guidelines for each set of standards. They concern the provision of services to nursing and residential homes, instalment dispensing services, the home delivery of medicines, provision of domiciliary oxygen services, needle and syringe exchange schemes, and the collection and disposal of pharmaceutical waste by community pharmacists. The standards will be published as soon as possible. Lottery opposition Council confirmed its opposition to the sale of lottery tickets in pharmacies, after a business had made a proposal for pharmacies to sell lottery scratchcards to raise for pharmacy-related monev charities.

Fee class in Register Council agreed to submit to the Privy Council its proposed amendment to the bylaws to add the class of registration fee paid to entries in the annual Register of Pharmaceutical Chemists. Only one pharmacist commented on the proposal during the 60-day consultation period.

Premises fee opposition The Department of Health has received two representations opposing the proposed increase in the pharmacy premises retention fee for 1998. One suggested restricting the increase to 2.4 per cent, in line with the global sum increase; the other had suggested freezing the fee. The former would mean about \$13,000 less income for 1998 and the latter about \$39,000 less.

Electronic data interchange Council approved a response from the Society to the NHS Executive's consultation on EDI of prescription data (*C&D* October 25, p4). The response emphasises the benefit of patient medication records in recording pharmacists' interventions. It will also object to the document's assessment of the recording of non-prescription medicine sales in the pharmacy as being of little benefit and low priority, particularly when patients are being encouraged to consult a pharmacist rather than a doctor for advice on common ailments. Update on Birdsgrove Council is receiving monthly updates on plans to dedicate part of Birdsgrove House as a treatment centre for pharmacists and other health professionals with alcohol- and drug-related problems. Application forms for the registration procedure have been submitted to the local health authority and an application is due to be made for the necessary planning consent for work to comply with fire regulations. After the change, the new director will be responsible for running Birdsgrove House as a whole. Advertisements for staff will be placed in January, 1998, and 24-hour nursing cover will continue. All areas of the house currently available to guests for convalescence will continue to be available, apart from the top floor. Activities relating to the treatment facility will be housed in the adjacent cottage which is being renovated for this purpose. HAS 2000 The Society is to work with the relaunched Health Advisory Service - provisionally renamed HAS 2000. The service was formally launched on November 11, with the remit of developing a proactive advisory and consultancy service to improve the delivery of health and social care services for the mentally ill and older people.

Spending review Council approved a response to the NHS

Executive on its comprehensive spending review, emphasising ways in which pharmacists can help control increases in health expenditure.

Veterinary medicines The Society is to support discussions between the Pharmaceutical Group of the European Union and the European Veterinary Association to determine whether a common stance could be taken on a harmonised classification of veterinary medicines in Europe. The EC wants to classify these medicines as prescription or non-prescription, whereas the Veterinary Medicines Directorate supports the UK's third category of pharmacy and merchants list products.

Hospital specialisation Council supported a Guild of Hospital Pharmacists' statement on proposals for developing a European specialisation in hospital pharmacy, on the understanding that it would not prevent any pharmacist from beginning to practise in hospital pharmacy.

Regional network Ian Caldwell was concerned about the formation of the West Midlands Regional Pharmaceutical Network, initiated by Keele University as means of bringing together pharmacists from various branches of the profession. He said it seemed to mimic, and possibly weaken, the role of the Society's branch and regional structure. But Linda Stone, a member of the group, said the Network was set up to advise and inform those in regional offices about pharmacy for the benefit of the patient and profession, and tried to improve networks for pharmaceutical services in the area.

Tomlinson becomes honorary member

Sir Bernard Tomlinson, a former Privy Council nominee of the Royal Pharmaceutical Society's Council, was presented last week with a certificate of honorary membership of the RPSGB.

Making the presentation, the Society's president, Peter Curphey, said that honorary membership was not lightly bestowed; fewer than 200 people had been so honoured since 1868. Sir Bernard's service to the NHS had been outstanding, not only in his specialist field of pathology but also in administration, particularly as chairman of the Northern Regional Health Authority from 1982-90.

He was nominated to serve on Council in 1990, but in 1991 was given the task of carrying out an independent inquiry into London's health services, which meant he was not able to devote as much time to the Society's work as he wished, the president said. But after completion of the inquiry, the Society had the full benefit of his experience and enthusiasm until March, 1995. Sir Bernard had helped develop the Society's policies for the pharmaceutical sciences and had helped start the process of reorganising the committee structure.

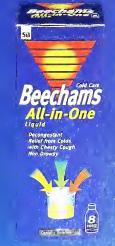

Thanking the Society for his certificate, Sir Bernard said his time at the RPSGB had been interesting, quite often provocative, sometimes intensely irritating, but never without value.

The new look See Challs Cold Care range

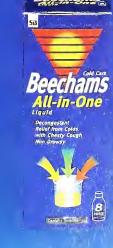

A new launch. A new look. A new range that cold and flu sufferers will turn to time and time again.

The new Beechams range has innovative products to meet all your customers' needs. We've even added a new Hot Berry Fruits flavour for Beechams Flu-Plus and launched new Beechams Throat-Plus, a brand new development in sore throat lozenges.

Why it's important to remember to dispense the number one brand in Compression Hosiery

Scholl

1. Scholl is the customer's first choice for Compression Hosiery. Over 80% of all Compression Hosiery worn is Scholl.

Scholl

2. The Medical Profession believes that Compression Hosiery is essential for prevention and treatment of venous problems, such as leg ulcers and varicose veins.

Scholl

3. Research shows that the recurrence rate of venous leg ulcers in patients who wear **Scholl** Compression Hosiery is dramatically reduced from an average of 70% to 26%.

Scholl

4. Scholl is committed to training and education and works closely with the NPA, RPSGB, and nurse leaders.

Scholl

5. Every year the **Scholl** team meets over 100,000 health professionals, providing training and information for nurses and pharmacists alike.

Scholl

6. Scholl attends all major woundcare exhibitions, and runs workshops and lunch time meetings in surgeries and nurse bases across the UK.

Scholl

provides practical help in the form of fitting socklets, swatches, and tape measures as well as its Complete Guide to Compression Hosiery all of which are free to pharmacists and other health professionals.

Scholl

8. Scholl invests in the Compression Hosiery market with research and new product development, to ensure that it is at the leading edge of Compression Hosiery technology.

Scholl

9. With the **Scholl** name come the attributes of quality, care, expertise and investment in the market.

Scholl

10. No other Compression Hosiery manufacturer can offer the same level of professional support.

The signs, symptoms and management of this underrated condition *VI*

Medical Update

Heart attack sufferers complain of a 'limbo land' existence in the community VII

It's a kid's game

The challenges of paediatric medicine, once the domain of specialist hospital units, are now overspilling into the community. Leonie Duke and Robert Urquhart, paediatric pharmacists at Guy's & St Thomas' Hospital, outline the main issues

he use of medicines in children presents us with many challenges which need to be addressed if we are to effectively meet the pharmaceutical care needs of these patients and their parents or carers. As a result of the increased requirement to meet children's healthcare needs in the community, a basic understanding of the principles of drug use in children is essential.

Kinetics & dynamics

Children should not be considered as scaled down adults as the difference in dose is not purely dependent upon body mass. Age-related differences in drug handling (pharmacokinetics) and drug sensitivity (pharmacodynamics) occur throughout childhood and account for many of the differences between drug doses at various stages of childhood.

Absorption

In the early days after birth, the secretion of acid from the stomach, bile from the liver and pancreatic enzymes are all significantly reduced, but increase during the neonatal period. Adult gastric pH is achieved by the age of two.

As a result, the absorption of acid labile drugs may be increased and absorption of fat-soluble drugs may be reduced in neonates.

The rates of gastric emptying and gut motility fall during infancy and early childhood. The extent of drug absorption is not usually altered, although the rate of absorption may be, and as a

The health needs of children are a challenge to the community

consequence sustained release formulations should be used with caution during childhood.

Neonates and children also have a thinner stratum corneum and a greater body surface area to weight ratio compared to adults. As a result, the potential for systemic side-effects after topical application should be considered, especially when potent agents are used; application is to broken or inflamed skin; occlusive coverings are applied; or the

child is very young.

Rectal absorption can be erratic and unpredictable in children, although this may be a valuable route for drug administration.

Absorption after intramuscular or subcutaneous injection is largely dependent upon tissue perfusion and therefore minor fluctuations in absorption time are unimportant.

Distribution

During infancy, the percentage of body weight

THE COLLEGE OF PHARMACY PRACTICE

This course (module 1073), in association with multiple choice questions being published in *C&D* December 13, provides 1 hour of continuing education

OBJECTIVES

- To understand the basics of pharmacokinetics and pharmacodynamics in children.
- To be aware of the issues relating to unlicensed medicines.
- To recognise problems of administration and compliance.
- To be familiar with common information sources.
- To appreciate the need for seamless care in paediatrics.

which is water is significantly higher than in older children or adults. As a result, watersoluble drugs are diluted to a greater extent in neonates and larger doses may be required to produce the required plasma concentration.

The blood-brain barrier is poorly developed in neonates, and drugs which do not normally penetrate the CNS can do so in the neonatal – for example, gentamicin, which is used in the treatment of neonatal sepsis and meningitis.

In neonates, highly proteinbound drugs often show a reduced degree of binding. This is a result of competition between bilirubin (elevated in neonates) and albumin. Displacement of bilirubin increases the concentration of free bilirubin and can lead to CNS toxicity. This problem has been reported with sulphonamides.

Metabolism

There is a great degree of

Continued on Pli

◀ Continued from PI

inter-individual variation in hepatic metabolism in both adults and children.

The rate of hepatic clearance is dependent upon a combination of the maturity of the hepatic enzyme systems and the size of the liver relative to body weight. Hepatic enzyme pathways are also immature, but develop by the age of one.

Generally, as a result of metabolic immaturity, hepatically-cleared drugs will be cleared more slowly in neonates and therapy needs to be closely monitored. Efficacy and side-effects should be closely looked for and, if appropriate, plasma levels should be monitored, eg phenytoin, phenobarbitone.

In children, the liver is up to 50 per cent greater as a percentage of total body weight than in adults. Once the hepatic pathways are mature, an increased metabolic rate may be seen and higher doses required.

Excretion

The kidneys are relatively immature at birth, and both glomerular filtration rate and tubular secretion are poorly developed. Neonates and infants therefore have a reduced ability to eliminate drugs renally and need dose reductions. Maturity is reached by eight months.

Choice of drugs

The number of drugs prescribed

for children is very small, especially if one only considers those licensed for use in children.

Drug research usually takes place primarily in the adult population, with little or no research being done in children. If only licensed drugs for licensed indications were used, many children would be deprived of valuable therapeutic treatment. The Royal College of Paediatrics and Child Health (RCPCH) and the Neonatal and Paediatric Pharmacists Group (NPPG) Joint Medicines Committee are looking to resolve these issues and produce national guidelines for prescribing in children.

Doses

Age bands are often used for licensed products with large therapeutic indices. They are convenient and easy to calculate, but do not allow for inter-patient variability.

Children should not be considered as scaled down adults

Doses calculated on a weight or surface area basis are more accurate, as they allow for greater individualisation. The average weight for various ages can be found from the Percentage Method table in the Prescribing for Children section of the British National Formulary. The percentage method, taking a proportion of the adult dose, may be used for the estimation of a dose in a new drug where there is no other information available.

Medicine administration

The administration times of medicines

in children may also cause complications not encountered in the adult population.

Babies and young infants spend many hours sleeping, and administration times may need to be adapted to fit into their waking hours. Many schools and nurseries have drug policies which do not enable the easy administration of medicines within schooltime. Drugs which require only once or twice a day administration increase compliance and encourage regular dosing.

Oral

Medication in children is primarily administered orally in community practice. Liquid formulations are the easiest to administer and most of the drugs licensed for oral use in

children are available in this form. Unlicensed liquid formulations need to be extemporaneously prepared and have short expiry dates which require regular dispensing. Manufactured specials often have longer expiry dates, but may be difficult to obtain in the community. There are an increasing number of licensed manufacturing units within hospital pharmacy departments that are able to supply community pharmacists with manufactured specials.

Children over five years of age can usually swallow a tablet. However, children as young as three years, particularly if they have a chronic illness, may be taught. Standard tablets (eg not enteric coated or sustained release) may be crushed or halved. The increased availability of tablet crushers and cutters has improved this as a method of administration. For a small number of drugs the use of the intravenous solution given orally may provide an acceptable oral formulation for example, phytomenadione injection.

Dispersible and chewable tablets are also available for children.

Rectal

The rectal route may also offer an easy route of administration in particular circumstances – eg, rectal diazepam to control a seizure.

Parenteral

The intravenous route is not always appropriate in the community but is expected to increase with the rise in home care (hospital care in the community). In cystic fibrosis, the option of intravenous therapy in the community may be desirable and lead to a better quality of life with less hospital admissions.

The subcutaneous and intramuscular routes are still the most common method of parenteral administration in the community.

Inhalers

Spacer devices used with inhalers provide an efficient and effective mode of drug delivery into the child's lung that suits most age groups. Dry powder devices can generally be used in children over four years of age and some require inspiratory flow rates as low as 30 litres/minute, eg Turbohalers. Children over ten years are usually capable of using an inhaler and the breathactuated devices may aid technique.

Compliance Taste is often the greatest problem.

This can partially be overcome by using an oral syringe (dose measurement is also easier and more accurate) or a straw. Masking the medicine with some milk or chocolate before and after the medicine may also help. Diluting the medicine does not dilute the taste but results in more volume to take. The addition of medicine to liquids or feeds can, however, be useful, but it is important to ensure it is compatible and that the parent or carer knows the importance of the entire portion being taken.

Parents and carers need to be considered as well. When explaining the use of unlicensed drugs in children, it is very hard to strike a balance between informing parents and alarming them. Most parents should be informed of this by the initiating clinician. However, it is more difficult to inform them of 'off-label' use as the clinician may not be aware of this.

Patient information leaflets (PILs) provide valuable information, but can also cause great concerns over safety. The PIL may highlight to the parent the unlicensed use of a product and informing the parent of this at the time of dispensing may

allay their subsequent fears. Dosettes and other memory aids (eg wall charts) are also invaluable for many parents. Wherever possible, medication administration should be organised to fit into the family's routine.

Information sources

Continuity of care from hospital to

community often requires the community pharmacist to have access to the same resources.

While the BNF contains licensed doses for use in children, it is not a complete reference source for drugs used in children. National prescribing guidelines for the use of medicine in children will enable doses to be sourced with greater ease. Currently, however, there are hospital-produced dose guides, such as the 'Guy's, St Thomas' and Lewisham Paediatric Formulary' and the 'Alder Hey Book of Children's Doses'.

Other useful resources are regional drug information centres, paediatric pharmacists or manufacturing units in the hospital initiating supply. Special manufacturers and drug companies often have information not found in the Summary of Product Characteristics. Health authorities and pharmaceutical advisers are also a good resource for providing or finding extra information with regard to the unusual use of a medicine in children.

Interface issues

Healthcare is increasingly shifting

from the hospitals into the community, and this is especially true for paediatrics. In order to facilitate 'seamless pharmaceutical care', twoway communication is required between healthcare professionals in hospitals and the community.

Basic information about children's discharge medicines are usually supplied to GPs via the discharge letter which often incorporates the discharge prescription. In addition, hospital pharmacy departments should be informing community pharmacists about medicines which are likely to cause problems. These include drugs which are unlicensed or being used 'off-label';

Today, children are less likely to be admitted to hospital

extemporaneously prepared products; or drugs for which it is particularly important that the formulation is unchanged.

At our hospital, we give the parents of all children discharged on an unlicensed product a letter to show to their community pharmacist. This outlines how further supplies may be obtained and hopefully saves the parents, the pharmacist and the GP time and effort.

It also increases the likelihood that the child will continue to receive the same strength and formulation as was supplied in hospital. This can be very important: many parents remember the volumes of liquid preparations their children take and therefore altering the strength may alter the dose being given; and changing the formulation of an extemporaneously prepared liquid can significantly alter the drugs bioavailability.

When unusual therapy is to be continued in the community, it may be necessary to supply an information package which will allow that product to be safely prescribed, monitored and dispensed. This is usually presented as a 'Shared Care Protocol' and it is important that the community pharmacist and the GP are comfortable with the information included before supply begins. 'Shared Care Protocols' are more convenient for parents and

children. They also present an opportunity for community pharmacists and GPs to get involved in monitoring and counselling parents and children about unusual or high-tech drug therapy.

Unfortunately, at present, the information provided to community pharmacists is often incomplete. This situation could be tackled by direct communication between hospital and community pharmacists, rather than depending upon either parents or the GP to pass on information. The majority of hospital paediatric pharmacists would be happy to discuss particular problems with community pharmacists. If we know that problems are occurring, we can try to prevent them happening again. A telephone call to the relevant hospital pharmacy department may be the quickest method of solving the problem for both the community pharmacist and the parents.

The provision of good information from the community to hospital when a patient is admitted may be of considerable help. Uncertainty over a patient's pre-admission therapy is a very commonly encountered problem for all hospital pharmacists. On admission to hospital, parents and children are often unclear about which medicines are taken and when, and they often do not bring their drugs with them. Community pharmacists

could be of help in this situation as their patient medication record systems can answer these questions.

Future developments

care needs of children in the community offer much scope for pharmacists to extend their

Children are now less likely to be admitted to hospital and are discharged earlier than in the past. Care in the community will involve children receiving more intensive therapy at home. Many of their requirements may be met by home care teams or outreach nurses from hospital. The community pharmacist's role can be developed to include counselling on the use of 'high-tech' medicines, monitoring children for the response to, and side-effects from, their drugs, and working within agreed protocols to optimise therapy.

As drug regimens become more complex, compliance deteriorates. The use of compliance aids, such as dosettes, can help.

The community pharmacy may be the first port of call for a parent with an unwell child. Pharmacists must have sufficient knowledge of paediatrics to enable them to advise parents. Further deregulation of Prescription Only medicines will enable the community pharmacist to counter prescribe more effectively.

The community pharmacist is a valuable member of the team of health professionals caring for children in the community and, as such, is in a prime position to further develop their role for the benefit of children.

C&D is accredited by the College of Pharmacy Practice as a provider of distance learning material until October, 2000.

ACTION PLAN

1 Find out the name of your local hospital paediatric pharmacist. Make contact to ensure you can refer to them when needed. 2 Discuss with the paediatric

pharmacists how medication and its administration can be made more 'pleasant' for the patient. 3 Consider the various methods of drug administration for children. Draw up a protocol on advising parents/carers on correct administration.

The panic button

Panic attacks are not simply about overanxiety. The acute psychological and physical symptoms can be severely debilitating to sufferers, says Fawz Farhan

e all experience anxiety in one form or another, whether it is the gnawing worry of exams or the three-second thrill of a bungee jump.

But whereas most people can keep on top of such anxieties, someone with panic disorder completely loses control. They experience uncontrollable anxiety towards everyday problems, culminating in a panic attack.

Psychiatrist Dr Ian Medley at the Mandala community psychiatric centre in Nottingham says the normal body response to anxiety is fear and apprehension, both of which are short-lived and confined to the incident. "You learn to calm yourself intellectually, so the body calms down as well. In panic attacks, the sympathetic nervous system fires off uncontrollably," he explains.

It is estimated that around 3 per cent of the population will have suffered from panic disorder at some point in their lives. However, this may be an underestimation as many do not seek medical help because they are either unaware of the problem or of the types of treatment available.

Definition

Panic disorder is a chronic anxiety condition which

manifests itself as acute episodes of anxiety, or panic attacks.

Attacks are difficult to predict, lasting anything from a few minutes to several hours. Nocturnal attacks can also occur.

Panic attacks can be triggered by emotional stress or, in underlying chronic anxiety, by trivial everyday occurrences. They can also be set off by underlying

disorders such as phobias or depression. Major depression co-exists in 60 per cent of panic disorder cases. Coexisting disorders are more debilitating and have a worse prognosis.

Causes

No one knows how panic attacks arise or why they occur

in some people and not in others.

Certain rare tumours are accompanied by panic disorder and this is thought to be due to excess synthesis and release of monoamines. Low levels of serotonin in the brain are also implicated.

Noradrenaline and adrenaline, the neurotransmitters that control the sympathetic nervous system, are also involved – administering them artificially can induce the symptoms of a panic attack.

Patients undergoing drug and alcohol withdrawal may sometimes experience panic attacks.

Risk factors for panic disorders include the following.

• Gender – women are twice as likely as men to suffer from panic disorders.

 Age – patients aged 17-30 are most vulnerable.

• Stress – sufferers are more likely to have experienced the death or severe illness of someone close to them or to have been involved in a situation where they have not had any control.

 Hereditary – family history may play a part, but this is inconclusive as environmental factors may be involved.

• Education – a US study claims that people who have had less than 12 years of education are ten times more likely to suffer from panic disorder and seven times more likely to have coexisting agrophobia.

Symptoms The symptoms

The symptoms of panic disorder are a combination of the

physical and psychological symptoms of chronic anxiety. They are based on stimulation of the sympathetic nervous symptom – the 'fright or flight' reaction. This will include a combination of the following physical manifestations:

- shortness of breath
- dizziness
- palpitations and tachycardia
- trembling
- sweating
- nausea
- urinary and bowel dysfunction
- hot and cold flushes
- chest pains.

The psychological symptoms can include intense fear, particularly of dying or losing control, and of feeling detached from the real world. These physical and psychological symptoms give the overall feeling of panic.

The disorder remits and relapses over time with only a minority of sufferers remitting permanently. Early diagnosis and treatment will help sustain remission, shorten the duration of the illness and prevent co-existing disorders.

Diagnosis Although the first

panic attack occurs unexpectedly, it is usually preceded by regular episodes of anticipatory

anxiety. A major panic attack is defined by the 'Diagnostic and Statistical Manual of Mental Disorders' as one where at least four of the above symptoms are present. Minor panic attacks, also called 'limited symptom attacks', involve fewer than four symptoms. Another diagnostic feature is the frequency of attacks - one unexpected major panic attack followed by four attacks within four weeks of anticipatory anxiety.

Other diagnostic criteria include absence of specific trigger (excluding phobia), feelings of intense fear, abrupt start and symptoms lasting at least a few minutes.

Drug therapy Around seven out of

Around seven out of ten people will benefit from drug

therapy. Treatment is usually either with benzodiazepines or antidepressants or both.

- Benzodiazepines: these are good at reducing anxiety quickly, but the problems of side-effects and dependence means that they should only be used short-term. They are often used in combination with antidepressants, usually in the first two to four weeks until the antidepressant effects kick in.
- Antidepressants: these are

CHEMIST & DRUGGIST 15 NOVEMBER 1997

useful options, particularly as panic disorder is often accompanied by depression and/or agrophobia.

Tricyclic antidepressants, monoamine oxidase inhibitors and selective serotonin reuptake inhibitors are all used in panic disorder. But the more sedative they are, the better they tend to be, says Dr

The sedating tricyclics, which are already established in the treatment of panic disorder, means they are often used as first-line therapy. The SSRIs can initially make people worse because of their alerting and arousing effects, and a benzodiazepine is usually added. However, they have the advantage of a wide safety margin and less of the other side-effects associated antidepressants. Paroxetine, fluoxetine and citalopram are licensed for panic disorder.

Duration of treatment in panic disorder without depression is between three months to a year, and longer if depression is present.

Counselling Panic disorder is

one area where psychotherapy and

relaxation techniques alone may be sufficient at controlling the disorder.

Dr Medley recommends a combination of medication and cognitive therapy. "Most people do best on both. I start them on medication and then offer cognitive therapy to help them get on top of things. I then withdraw the drugs.

Behavioural therapy includes: coping mechanisms – patients are taught to focus on their current difficulties and devise methods of coping with them. Therapists can also teach sufferers to cope with the physical sensations produced by an attack

- relaxation techniques these can help reduce general stress and anxiety levels which set off a panic attack. Breathing exercises can help sufferers control their breathing and avoid hyperventilation which can trigger or exacerbate panic
- group therapy meeting with fellow sufferers can encourage people to overcome their condition.

Heart attack survivors living in community 'limbo land'

Without support, patients who have been in specialist cardiac units feel isolated once discharged

oor community support for heart attack survivors is leaving many in a 'limbo land' state of isolation and confusion, according to a nationwide survey launched in time for Heart Check Action Week (November 9-15).

Patients who have been cared for in specialist cardiac units in hospitals and who have undergone rehabilitation programmes suddenly experience panic, isolation and confusion once

discharged into the community, states the survey.

Without the support of medical staff and other patients, their lives become dominated by a quest for advice and reassurance.

Many respondents worried over every little twinge, believing it to be an early warning sign of a secondary attack. They were also confused on whether everyday activities, such as cleaning and driving, were

safe. A continuous education programme would help to alleviate such concerns.

Respondents believed other improvements could be made in bridging the gap between primary and secondary care; counselling on secondary prevention; facilitating access to specialist advice and information; and setting up local patient networks.

Every year around 300,000 people in the UK suffer a heart attack, half of whom will

Dealing with childhood gastro-oesophageal reflux

ild or moderate reflux in children should be treated **▼ L**with a combination of changes in posture, diet and feeding habits.

The Drug and Therapeutics Bulletin recommends giving infants frequent and smaller feeds, laying them on their left side and thickening their feeds to treat reflux. If these initial measures fail, an alginate combination can be administered followed by cisapride to increase motility.

It recommended that older children avoid caffeine, chocolate, spicy food and fruit juices. If these measures did not work, then medication,

such as alginates and cisapride, were recommended for protecting the oesophagus and increasing gastric motility.

If there are complications, such as respiratory disorders or suspected oesophagitis, specialist investigation is needed. H2-receptor antagonists may be necessary, but it should be noted that cimetidine is the only one with dosage recommendations for children with reflux.

The proton-pump inhibitor omegrazole, which is not licensed for use in children, may prove useful in treating oesophagitis in children with impaired neurodevelopment who might be resistant to H2receptor blockade.

Omeprazole reduced the symptoms of severe oesophagitis, such as pain, vomiting, dysphagia and haematemesis, in two uncontrolled studies involving a total of 30 children. But in a different controlled study, involving 32 children, it proved neither more or less effective at healing oesophagitis and reducing symptoms as highdose ranitidine.

Surgery is indicated for treating late complications of reflux, like stricture, persistent respiratory problems and Barrett's oesophagus.

DIAL Alder Hey for national paediatric drug information

A lder Hey Children's Hospital in Liverpool has become the national drug information centre on paediatric and neonatal medicine.

DIAL, the Drug Information Advisory Line, has been set up in the hospital's pharmacy department to help healthcare professionals share experience and expertise. As well as answering queries, DIAL will also collate and disseminate information on common problems and assist in the development of paediatric pharmacy practice.

The lack of set guidelines in

paediatric and neonatal medicine prompted Alder Hey to look at setting up a national centre of information. Problems include the lack of evaluated paediatric drug data; the prescribing of drugs for children outside the product licence; the limited access to drugs and information in rare diseases; and the lack of proprietary paediatric preparations.

Speaking at the launch of DIAL, director of pharmacy Tony Nunn stressed that the centre was not intended to replace local resources. "In most cases, it would be more

appropriate to direct enquiries to the local drug information pharmacist or local children's hospital in the first instance. We are here to provide advice on more complex cases or to provide a second opinion when necessary."

DIAL is manned between 8.45am-5.00pm, Monday to Friday (tel: 0151 252 5837 or fax: 0151 220 3885). E-mail and Internet access are planned.

DIAL is funded by a twoyear educational grant from Hoechst Marion Roussel. Alder Hey is hoping to get NHS backing thereafter.

Call for obesity to be reclassified

besity experts called for obesity to be officially recognised and treated as an illness at a conference in London last month.

Dr Andrew Prentice from the Dunn Clinical Nutrition Centre in Cambridge highlighted the fact that treating obesity uses up 3 to 8 per cent of the health budgets of affluent countries, equivalent to £1.2-£3.2 billion for the NHS.

It is also the second leading cause of preventable mortality in the UK. "By defining obesity as a disease, you get people to take it seriously," he said.

Dr Prentice described obesity and non-insulin dependent diabetes as virtually synonymous. "Men who are obese have a 40-fold risk of developing the illness, and for women, the risk is even higher. Seriously overweight women are 100 times more likely to develop diabetes," he said.

Large-scale studies have shown that obesity is the main predictor of new cases of diabetes. Body mass index has risen markedly over the last 30-40 years.

Dr Cyril Weinkove, the director of Manchester's Hope Hospital obesity clinic, said that 80 per cent of cases of non-insulin dependent diabetes could be cured by helping sufferers manage their weight. For some, losing 10-15ib would enable them to come off insulin.

Dr Weinkove also recommended weight loss as a way to improve general health, saying: "Weight management improves cardiorespiratory dysfunction, hypertension and hyperlipidaemia. It can also improve oesophagitis without surgery."

He pointed to a lack of understanding by GPs.
Training lacked information on the different methods of managing the condition. Many GPs assumed that patients could help themselves.
"Obese people want help from GPs, but they often don't know how to help," he said.

Antidepressants in smoking cessation

The antidepressant bupropion may have a role in helping people to stop smoking, according to a report in *The New England Journal of Medicine*.

Bupropion is a weak uptake inhibitor of noradrenaline and dopamine. Its dopaminergic activity may affect the areas of the brain associated with the reinforcement properties of addictive drugs, while its noradrenergic activity may affect nicotine withdrawal.

US researchers conducted a double-blind, placebo-controlled trial of 615 smokers, randomly assigned to receive placebo or 100, 150 or 300mg of sustained release bupropion per day for seven weeks.

Smokers with current depression were excluded, but not those with a history of major depression.

Brief counselling was provided at the start of treatment, weekly during the treatment period, and at eight, 12, 26 and 52 weeks after the trial's start. Selfreported abstinence was

Smokers are more likely to have depression than non-smokers

confirmed by a carbon monoxide concentration in expired air of 10ppm or less.

After seven weeks, the rates of smoking cessation were 19 per cent for the placebo group, 28.8 per cent in the 100mg group, 38.6 per cent in the 150mg group, and 44.2 per cent in the 300mg group.

At one year, the respective rates were 12.4 per cent, 19.6

per cent, 22.9 per cent and 23.1 per cent. The rates for the 150mg and 300mg group, but not the 100mg group, were significantly better than those of the placebo group.

The most common adverse effects of treatment were headache and insomnia (30 per cent), rhinitis and dry mouth (10 per cent).

An additional effect of bupropion was reduced weight gain – weight gain was inversely related to the drug's dose in patients who abstained from smoking throughout their treatment.

Smokers are more likely to have major depression than non-smokers and researchers have postulated that nicotine may act as an antidepressant in some smokers.

The US Food and Drug Administration recently approved Glaxo Wellcome's sustained release form of bupropion (Zyban) as a prescription drug for the indication of smoking cessation. There are no plans to launch Zyban in the UK yet.

PHARMACY distance learning for pharmacists

Pharmacists using **Pharmacy Update** for continuing education are reminded of the need to test. *C&D*'s readers can self-test their progress by using the multiple choice question (MCQ) paper to be

inserted in the December 13 issue, which will cover this week's CPP-accredited modules, together with those in the November 1 issue of the magazine.

In other words:

- Pneumococcal infections (1071)
- Eye problems (1072)
- Paediatric medicine (1073)

A faxback service for these modules and associated MCQs

operates on 0891 444791 (premium rates apply).

A telephone marking service offers independent verification of results – details are given on the monthly MCQ papers.

Licensing dilemmas

We read with interest Xrayser in C&D October 25, concerning the need for dressings and similar appliances to be licensed if they make medical claims.

We are concerned to see an issue thoroughly debated and legislated for in the EU once again under scrutiny.

Six years ago, the Medicines Control Agency announced all moist wound care plasters/dressings were medicinal products and would need a licence within two years. Coloplast took action to meet the specific requirements.

However, European legislation overtook the UK process. The final decision was moist wound care plasters/dressings are a medical device. Therefore, they do not come under the MCA but the Medical Devices Agency. Coloplast has always abided by UK legislation and Compeed plasters all carry the CE mark.

In addition, independent means do exist to assess the efficacy and safety of our products. Clinical studies were carried out in Denmark by an independent body.

Specifically for the Compeed psoriasis plaster we contacted the MDA to confirm that the product is in line with legislation. We are also working with the Psoriasis Association and the Psoriatic Arthropathy Alliance to set up sampling opportunities to gain further information about efficacy.

Perhaps it is also worth considering the implications of licensing products such as plasters and dressings. The huge costs in time and money would inevitably be passed to the consumer.

Consumers only repeat-buy products they like and are effective. A reputable company will only survive if its products live up to their claims.

Vibeke Larsen

Business manager, Coloplast

Veterinary pharmacy option After reading G Hewins' letter (C&D November 7) I feel I can answer all his questions on the supply of animal medicines.

Brian G Spencer is a wholesaler of veterinary medicines and manufacturer of Ruby Animal Medicines specialising in supply to pharmacies. It has access to all animal medicines, no minimum order and supplies in singles. Orders under £200 incur a carriage charge of up

to £6 (plus VAT), but means to decrease this are being looked at. POS material is free of charge and a package for small companion animals has been developed.

I feel pharmacy is poorly represented in this £200 million market and I am working hard to broaden pharmacists' and assistants' knowledge. Brian G Spencer is currently in the proof-checking stage of a training package for veterinary pharmacy. This will be offered free of charge to all our customers (new and old).

Brian G Spencer has been raising awareness of veterinary pharmacy by exhibiting at Chemex 97 and BPC Conference 97, and advertises regularly in *C&D*. The company is owned by pharmacists working for pharmacists' futures.

Smoking witch-hunt

The claim that exposure to environmental tobacco smoke poses a significant risk to the health of non-smokers (*C&D* October 25) is wrong and provides no grounds to hound smokers still more.

The British Medical Journal's analysis is not new research and represents a rehashing of old studies which were themselves subject to criticisms when published.

However, the claimed increase risk of 1.25 is well below what statisticians regard as being meaningful.

Even within the medical profession, it is recognised that relative risks are often reported incorrectly.

Not only does this scaremongering add to the bigoted hostility that smokers face each and every day, but it is used as justification for restrictions on individual liberty. With her reaction, public health minister Tessa Jowell gives official sanction to smokeism - the institutionalism of discrimination and the legitimisation of prejudice against this country's 15 million adult smokers. Martin Rall

Information officer, FOREST

Is PSNC truly representative?

It is interesting that Dick Hazelhurst is trying to teach the meaning of democracy to Hemant Patel (Letters October 25, p25). Maybe Mr Hazelhurst does not realise that, in a democracy, when those in charge make a mistake they apologise to those who have suffered as a result of their deliberations. I do not remember him or his colleagues ever apologising for the blunders of the last 15 years, during which time many of my colleagues have gone to the wall without compensation after many years of service, courtesy of the Pharmaceutical Services Negotiating Committee.

When I, as the chair of Barking & Havering Local Pharmaceutical Committee, raised the issue of distribution of the imposed global sum with Stephen Axon, he told me he would be quite surprised if the PSNC did not go for an even spread of the imposed increase across the board. This did not occur. What we now have is a small minority getting the greater slice of the cake.

It is about time each PSNC member told us how many prescriptions his pharmacy dispenses and the number of outlets he owns or represents. We can then all judge for ourselves how vested interests are conducting the debate on our remuneration.

I understand dentists have a separate sub-group to represent the interests of their London members, since they have different problems from the rest of the country. Yet the PSNC has not seen fit to make such representations as part of its remit. The PSNC's high-profile support for my rural colleagues in audible but similar effort is missing for urban pharmacists. To support one and not the other is gross injustice.

When a motion supporting a compensation scheme for those wanting to relinquish their contract was passed at the LPC Conference, the democratic PSNC chose to ignore it. When the PSNC was requested to convene a special conference before it accepted the final offer from the Department of Health so that the LPCs get a chance to have their say, the PSNC leadership went out of its way to ridicule the request.

I suggest Mr Hazelhurst reads the letter from Graham Turnbull of Romanno Bridge (on the same page as his letter) and then asks himself how well PSNC has negotiated on behalf of the independent contractors. I feel that the likes of Mr Hazelhurst are showing the same arrogance as the last Tory Government.

Jayvant Patel Romford Competition rules:

1. All entries must be on the official entry form. Photocopies are not acceptable. 2. The minimum age for entry is 18. 3. Only one entry per person is allowed. 4. The competition is only open to pharmacy assistants. 5. The competition is not open to employees of Reckitt & Colman Products Limited, members of their families or their agents. 6. All entries must be received by last post, 28 November 1997. Proof of posting does not constitute proof of delivery. 7. All entries become the property of Reckitt & Colman Products Limited and will not be returned. 8. The first ten correct entries drawn at random after the closing date will be awarded the prizes, 9. Winners will be notified by post by 18 December 1997. 10. A full list of winners will be available from Reckitt & Colman Products Limited on request after 18 December 1997. 11. The judges' decision is final. No correspondence will be entered into. 12. The prize must be accepted as offered. No cash alternative is available, 13, Reckitt & Colman Products Limited reserves the right to publicise the winners' names and photographs.

Active Ingredients: Each sachet contains 3.5g Ispaghula husk BP. It also contains aspartame. Indications: Conditions requiring a high-fibre regimen, e.g. relief of constipation, including constipation in pregnancy and the maintenance of regularity; for the management of bowel function in patients with colostomy, ileostomy, haemorrhoids, anal fissure, chronic diarrhoea associated with diverticular disease, irritable bowel syndrome and ulcerative colitis. Dosage Instructions: To be taken in water. Adults and children over 12 - one sachet morning and evening; Children 6-12 - Half to one level 5ml spoonful of the granules depending on age and size, morning and evening. Children under 6 - To be taken only on a doctor's advice. Contra-indications: Fybogel is contra-indicated in cases of intestinal obstruction, faecal impaction and colonic atony such as senile megacolon. Precautions and Warnings: Fybogel contains aspartame and should not be given to patients with phenylketonuria. Fybogel should not be taken in the dry form. Side Effects: A small amount of bloating and flatulence may sometimes be experienced during the first few days of treatment, but should diminish on continued use. Retail Sale Price: 10 sachets - £1.75. Marketing Authorisation: Fybogel 0063/0023, Fybogel Orange 0063/0026, Fybogel Lemon 0063/0024. Supply Classification: Through registered pharmacies only. Holder of Marketing Authorisation: Reckitt & Colman Products Limited, Dansom Lane, Hull, HU8 7DS. Date of Preparation: 9 September 1997. Fybogel, Fybogel Orange, Fybogel Lemon, the Fybogel logo and the sword and circle symbol are

Reckitt & Colman Products Limited

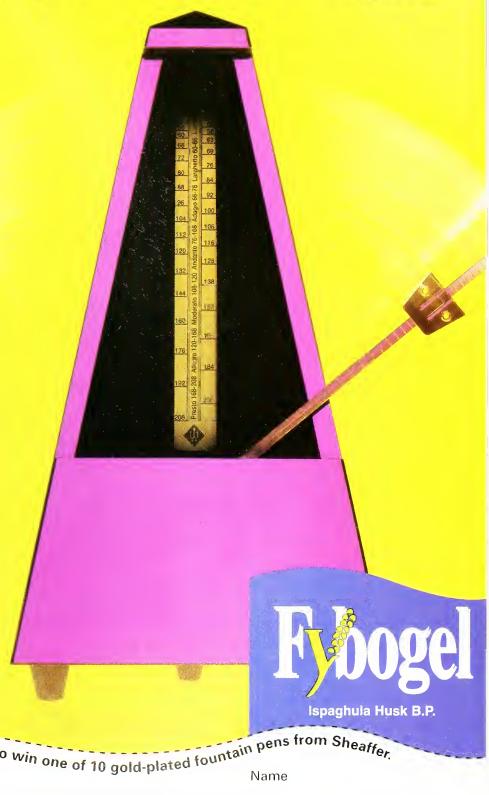

Helping to keep your customers regular

Fybogel is back in consumer press from October

The drive is on to bring your not-soregular customers back through the door for Fybogel. Press advertising will commence from October 1997 n popular weekend supplements and magazines. So be ready to give your customers regular advice about Fybogel and keep a healthy stock of Fybogel on your shelves.

Pharmacy assistants are invited to enter our competition to win a gold-plated fountain pen from Sheaffer.

A fast lifestyle can often lead to a diet of fast food and snacks - one that acks essential fibre. And you know your customers' digestive systems need fibre to help keep them regular. That's why Fybogel contains ispaghula husk, one of nature's richest sources of soluble fibre. In two pleasant tasting orange or lemon flavoured drinks, Fybogel is a simple way to help keep your customers regular.

Answer these Moving Questions to win one of 10 gold-plated fountain pens from Sheaffer.

Name

What does Fybogel contain to help maintain bowel regularity?

What are the two Fybogel flavours?

Name the object in the consumer press ad for Fybogel

What is the headline of the recent consumer press ad for Fybogel?

If you use a computer linked to an ordinary telephone line, and you are unhappy with the time it takes to send or receive information, ISDN might be just what you need. Adrian Morant offers a beginners' guide

The line to the future

data transmission

Network (ISDN) is the digital equivalent of our everyday telephone system. It accounts for one in ten of existing and 25 per cent of new business lines. At one time, the acronym was said to stand for Innovations Subscribers Don't Need. For those still using a 286- or 386based labelling system that could well still apply.

However, in reality, it is a major advance over the traditional analogue telephone line. ISDN enables data to be transferred reliably at higher speed, it provides a half-second call setup time in contrast to the ten or more seconds it takes with the ordinary telephone network, and it has features which can make communications far easier and more convenient. It will also be vital in enabling changes currently being mooted in community pharmacy to take place.

These ideas include the automatic transmission of script information, replacing the monthly task of sending the actual scripts to the pricing bureau; and making prescription data, collected in individual pharmacies, available for sale to market research organisations. It is not for me to comment on the feasibility of any of these and the changes in current legislation required before they could come to fruition.

That said, if pharmacy stays locked into the 1990s, and does not move forward

with other branches of healthcare, the modems used today will be perfectly adequate. After all, the 300bps modem attached to many 'legacy' computer systems will transmit an order to the wholesaler in well under a minute. Even though the 33.6Kbps (33,600 bits/second) modem supplied with computer kits such as the latest AAH Link systems are 100-fold faster, the time savings are negligible in real terms.

In a few words, ISDN provides digital channels for voice, data or image transmission, fast call setup and a number of additional features, such as multi-subscriber numbering (see below).

ISDN comes in two flavours: Basic Rate Access and Primary Rate. The former provides two 64Kbps channels and is the ISDN-2 service which BT is promoting heavily. While ISDN-2 is also available in some areas from the local cable company, BT is able to offer its service to 98 per cent of the population. With ISDN-2, the two channels can be

independently or together for for voice, image or the transmission of voice, data or any other type of information.

> Primary Rate, which can provide up to 30 64Kbps channels, is beyond the

scope of this article.

While it appears that the 64Kbps of ISDN has only a marginal advantage over the 56Kbps of the fastest modems available, actual transmission speeds with these modems is dependent on the quality of the telephone line. Speed can drop to just 100s of bits/second.

ISDN is a more complex technology than the Public Switched Telephone Network (PSTN) as it is correctly known. Instead of having a small socket on the wall into which the phone is plugged, BT provides a Network Terminator. This is a small electronic unit, roughly 15cm square. This has two sockets for connection to ISDN equipment. While there are special ISDN phones, it is more normal to use a terminal adapter to which ordinary phones, faxes and computers may be connected.

This all sounds terribly complex and expensive.

nel - are the same as for ordinary telephone calls, but connection and quarterly rentals are dearer, with those for BT's standard Low Start tariff being \$400 and \$88 respectively. Here it should be borne in mind that, as ISDN-2 provides two channels, this is the equivalent of \$200 and \$44 per channel. Recognising that the high connection charge is a barrier to many businesses, BT offers other tariffs, including Startup, which spreads the cost. In return for a \$200 connection fee, customers pay a higher quarterly rental of \$133.75. This does, however, include a \$26 call allowance so is effectively \$107.75. This allowance is increased after two years to bring the effective costs of both tariffs into line.

There is an additional quarterly charge of \$10 for multi-subscriber numbering which gives the customer a group of ten numbers for the ISDN-2 connection at that shop. While this appears strange, it is an elegant concept. majority of terminal adapters have three ports: two for connecting to analogue devices such as phones, faxes or modems and one for connection to a computer serial port (where

Why is Bepanthol a solution they can count on for problem dry skin?

5% For daily all over body use. It is specifically designed to protect against the drying effect of showering.

For daily all over body use. It is specifically designed to soothe and soften dry, cracked skin.

for extremely dry sore patches.

Imagine a range of dry skin products you and your customers can really count on. Roche already have. The Bepanthol range, already proven throughout Europe, is a unique approach to problem dry skin, which is also suitable for eczema and dermatitis. Bepanthol skin conditioners each contain a different amount of moisturising power, called a Skin Conditioning Factor, which soothe and soften dry.

cracked skin at different levels. These Skin Conditioning Factors form a non-greasy protective film over the surface of the skin, holding in the body's natural moisture. Bepanthol also contains Pro-Vitamin B5, which promotes natural healing. At last, whatever age they are, your customers can choose their own level of care for problem dry skin.

Continued from P22

the modem is normally attached). By giving an individual number to each of these ports, any one of three devices can be connected at the same time and have its own number, even if only two of them can be in use at the same time (one on each channel).

In addition, two-way adapters can be used on the analogue ports. Thus, even with a basic set-up, the pharmacy can have, say, one number with one or two phones connected to it; a scparate number for a fax (that same 'line' can be used for outgoing calls which would not tie up the normal phone number); and a separate number for the computer. In reality, this means that while the 'phone line' is kept free for incoming calls, the other channel can support incoming and outgoing laxes, outgoing phone calls, as well as the data connection to the computer.

But how does one go about getting it working once BT (or your cable company) has installed the ISDN-2? Terminal adapters, being the ISDN-2 equivalent of modems, can be obtained through computer shops and magazines with prices starting at under \$200. However, even though connecting the phone and fax to the analogue side is just the same as normal, and con-

necting the terminal adapter to the computer is very similar to installing a modem on a computer, there are advantages in going to specialist suppliers which can advise on what equipment will best suit your purpose.

Some wholesalers currently

phone pharmacies to collect an order, which is taken verbally or by computer transfer initiated manually. Extra orders can be easily phoned in before the deadline and at closing time to accommodate last-minute scripts. However, at present, a large number of pharmacies dial

into the wholesaler's computer to place an order. Where the computer has its own 'telephone' number, the reverse procedure can be employed. Thus, the wholesaler will be able to collect the order at the latest possible moment to prepare each order without delaying the van.

Similarly, as and when the system comes to fruition, the local surgery will be able to send prescription information directly to the pharmacy by computer-computer transfer. This gives time for prescriptions to be dispensed before the patient arrives with the paper script.

In addition, it is feasible, with ISDN, for stock file updates from the pharmacy computer system supplier to be downloaded automatically into the computer, cutting out that regular chore of loading them from floppy discs received by mail. Where program

The wholesaler

will be able to

at the latest

collect your order

possible moment

updates are required, they can be carried out in exactly the same manner. Where the computer is left switched on and connected overnight, this can be dealt with out of hours safely and securely without

urely without human intervention. Password protection and calling line identification (which will only allow calls from an agreed number to carry out specified updates on the computer) will provide security checks.

Instead of the pharmacist having to remember to do the scheduled data back-ups (and to find the time to carry them out while working in a busy dispensary), this task can be handled overnight by specialist firms which would dial in to the computer and collect the data which would be stored securely.

BT has a service which is ideal

for all these types of applications. Called ISDN Nightline, it provides, in return for a special rental, unlimited calls during the period from midnight to 6.00am. Not only will the use of ISDN be cost-effective, additional use will be obtained from central computer facilities.

However, as David Watkinson, marketing manager at AAII – supplier of the Link pharmacy systems – points out: "Unlike a dog, a computer is not for life." Pharmacists must be prepared to regularly update or replace systems to benefit from modern technology. There are many systems based on old processors which will not be able to cope with these innovations.

In addition, the Internet is increasingly being used to gather information. ISDN provides faster access than even the fastest modem (current or future), even though there is the caveat that the bottlenecks are frequently not in the connection but at the locations being accessed. But can you think of a better way to access drug information or even current health warnings on tropical holiday resorts?

At a time when the Royal Pharmaceutical Society has published its strategic document, 'Building the Future', it is incumbent on community pharmacy to install the electronic infrastructure upon which to build.

Message Message

Moss is expanding rapidly and is ready to usher its stores into the New Age. The question, as Guy L'Aimable reports, is whether it can persuade community pharmacies to do so, too

nichem's promise – in the aftermath of its Lloyds bid – to continue hunting for good pharmacies was not an empty threat. Moss' store numbers recently passed the 500 mark and the chain expects to have 520 by the end of the year – 70 more than it had last year.

By 2002, Moss hopes to have 900-1,000 outlets, assuming the right opportunities arise. An outside observer could still draw unfavourable comparisons over its current size and the likes of Boots and Hills/Lloyds. Is Moss destined to be a relatively minor pharmacy force?

"I disagree – we're a major force," says Barry Andrews, its managing director. "Boots is predominantly High Street and is officially classed as a large mixed retailer – and a highly regarded one - rather than a community pharmacy. It has an OTC share that the rest of us can only dream of - but its share of the NHS market is directly proportional to its store numbers the same as ours. Hills/Lloyds still appear to be trading as separate entities and their only advantage is numbers.

Moss leads other multiples, adds Mr Andrews, in terms of professional development and innovations, which it passes on to independents through its advisory service.

The chain's strategy partly involves focusing on partnerships throughout the healthcare chain, combining 'micro marketing' – to ensure its pharmacies meet local needs – with firm financial controls. Its financial results reflect this tight grip – the chain's turnover rose 18.4 per cent to \$247 million for the year to December 31, 1996. Operating profits were up 27 per cent to \$15.6m and its operating margin rose from 5.9 per cent to 6.32 per

tested el lance est stores, it saved me costs. It equipme Only out where the cut shrin receive in The company of the costs of the costs. It explains the costs of th

Barry Andrews, managing director, says Moss is a "major pharmacy force"

cent. This year's turnover should be about \$300m, rising to about \$364m next year. Its operating margin will also be higher.

Mr Andrews still sees room for improvement. At Unichem's recent convention in Malta, he spoke about Moss' research on its OTC customers. He admits that such information "often

manifests itself as a statement of the obvious", but it is no less valuable for that.

Sixty per cent of pharmacy customers, for example, are either 'OAP socialite' or 'young mum with family'. These types need advice to buy their OTCs, while the remainder make up their own minds. Most of Moss' customers

know what they want, says Mr Andrews, although they may not explain themselves clearly.

"Attempting to change their mind by offering an alternative can be seen as confrontational and off-putting. It's like going into

a restaurant, ordering your favourite white wine and the waiter insists on trying to sell you a house red."

He admits the area needs more research to understand customers' decision-making more clearly.

On a more tangible level, Moss is grappling with the perennial business problem – containing costs.

Shrinkage is a traditional worry. Having

tested electronic article surveillance equipment (EAS) in 40 stores, the chain claims to have saved more than \$100,000 net of costs. It will be rolling out the equipment into half its stores. Only outlets that need EAS and where the system is expected to cut shrinkage by 50 per cent will receive it.

The chain has linked with Boots, Hills/Lloyds and Superdrug, through the British Retail Consortium's EAS partnership, to persuade manufacturers to insert security tags at the plants or distribution depots. Mr Andrews says 'source tagging' is only a matter of time as manufacturers already have the technology to do it.

Other recent Moss initiatives include loyalty cards for film processing and selected baby products, in-store touch screens for customers who want information, and *Helicobacter pylori* and allergy tests (*C&D* November 8, p28).

Mr Andrews is confident Moss

can meet future challenges. He is

not so sure about community pharmacies. Like Hills/Lloyds and AAH. Moss' link with Unichem gives the chain a delicate dual role. On the one hand, it is pushing to expand; on the other, it is equally committed to helping Unichem ensure a l'uture for community pharmacies. Mr Andrews' responsibilities typify this approach. Aside from running Moss since 1986, he is heavily involved in pharmacy politics and his current interests include membership of the Pharmaceutical Services Negotiating Committee and the Standing Pharmaceutical Advisory Committee.

He is naturally angry about the Government's remuneration offer of 2.4 per cent. "It's unfair compared to other healthcare workers and the contribution we make; hypocritical compared with the fine words of politicians and short-sighted because it's undermining an efficient, popular, national treasure," he says.

Surely he should not be surprised by politicians saying one thing when they are in opposition and doing another when confronted with the cold realities of government? "They are in a position to do something," he says. "In fairness, they've never promised to throw more money at pharmacies, but everyene says that pharmacy has got potential—we just want the opportunity to realise it."

At least, he adds, there is an element of stability in the Government's attitude. Alan Milburn, the health minister, has said the remuneration growth rate is likely to be similar over the next four to five years. "We might not like the message but it means we

shouldn't expect any surprises, so we can plan accordingly. That is why we've got to defend our margins – we've got to change the way we work to do that because there won't be any new money coming our way."

Pharmaceutical bodies have signalled the way ahead through the 'New Age' ini-

tiative. He says the move represents a huge step forward for most pharmacies, though he doubts whether many independents are ready to do so. "Many of them hear the words but don't understand the implications."

Pharmacists, particularly 'old-timers' who qualified 20 years ago, need practical guidance on this issue. "It's about making things happen – there's no evidence that things are happening. I don't know when it will start," he save

Mr Andrews is clearly frustrated because he believes the pharmacy industry is on the brink of a revolution, characterised by calls for pharmacists to be allowed to prescribe certain POMs, and to use information technology to share in-

formation about patients—with surgeries.

Jeff Harris, Unichem's chief executive, said pharmacists should consider pooling their resources to offer specialist vices as that would encourage the Government to redirect healthcare funds their way. Mr Andrews stres-

ses pharmacists should not abandon their core dispensing role, partly because it is the springboard from which other services would be launched. He smiles wryly when reminded that community pharmacists do not make great team members. "The expression I've heard is that it's like trying to herd cats," he says, although he points out the likes of Edinpharm, a new buying group, as proof that it can be done. The key is to offer the services at a local level.

Moss would help independents set up these services, following extensive consultation with health authorities to find out their needs.

The question is whether independents want that help. He admits the chain already offers them a lot of advice, but few take it. "It's probably apathy more than anything else and that's compounded by the sheer grind of day to day work, which makes it hard to lift your head above the dispensing—bench," he says. Those who do take the advice are "thrilled" by the results.

Given Moss' connections with supermarkets – it runs 63 instore pharmacies, including concessions in Asda – independents may doubt its impartiality.

Mr Andrews rejects the argument and says the chain is no longer criticised by pharmacists on this issue. Moss will not sell any more outlets to Asda – its intention was always to kickstart the chain's pharmacy interests, he says, not to develop them.

Besides, he adds, major supermarkets' in-store pharmacies will never threaten community pharmacies because their total number will not exceed 500.

"I want a strong community pharmacy sector with Moss a key player – not a weak independent sector with Moss a strong player," he says.

Everyone says that pharmacy has got potential – we just want the chance to realise it

New Unitex incontinence briefs help me feel happy, relaxed and confident.

And I don't even wear them.

Three million people suffer bladder control problems in the UK. Retail sales of incontinence products are projected to increase by 68% by the year 2000. That's a massive opportunity — and Unitex is here to help you make the most of it.

The 4 Unitex products are discreet — resembling regular underwear — yet twice as absorbent as other briefs on the market. They are washable and wearer—friendly too. Above all, they are profitable. Eye-catching packaging and a

Health minister criticises patient p

Alan Milburn, the health minister, has criticised the patient pack initiative for being too complicated and bureaucratic.

He has also queried the scheme's excessive costs, which the Department of Health estimates at \$60-70 million during the transition period.

His comments have been outlined in a Doll letter (see box), which has surprised and worried industry and professional bodies involved in the PPI.

The British Generics Manufacturers' Association has accused the Government of being "unwilling to play its part" in current patient pack talks.

Andrew Kay, president of the BGMA, told guests at its annual dinner that the generics industry was "alarmed and distressed" by Mr Milburn's comments.

The Doll's letter, he said, had ignored the broader benefits the initiative would bring to patients. And its cost estimates were flawed. He told *C&D* the estimate was higher than the sum agreed earlier by everyone involved in the initiative. The BGMA is to contact the DoH to find out how it calculated the figures (see box).

Patient packs: Department of Health probable costings

	1997/98	1998/99	1999/00	2000/01	2001/02
Prescribing and dispensing drift		1-4	2-5	2-5	2-5

Reduction in container allowance		(2)	(7-8)	(16-18)	(16-18)
PPA costs	3	3	3	3	2
Compensation for residual stocks		3	3	3	
Total (unadjusted)	4	16-19	23-27	15-20	11-16
Adjusted total – reflecting	4	16-19	24-26	17-18	13-14

£m at 1997/98 prices

Meanwhile, the Department's vague hint that it will be looking at alternative ways of implementing the directive struck a particularly sensitive chord. "It is exasperating, after years of discussion between all parties to define the best way forward, and significant capital spend on the industry's behalf on the basis of those discussions and past commitments, that the Doll now appears to be saving that it will come up with a new and different solution that has not been discussed," he said.

The initiative was bound to create difficulties and uncertainties, he added, because it represented a major change in dispensing medicines. Overcoming these barriers would take commitment and will.

Baroness Jay, who was the BGMA's principal guest at the dinner, sought to reassure the Association. The Government, she said, may reach different conclusions from the Conservatives on certain legislative issues. "But I hope you don't feel this is bad faith on the part of this Government," she said.

However, Baroness Jay confirmed that Mr Milburn had doubts about the PPI, although she stressed she would ensure he knows how the BGMA and other professional bodies felt.

The minister also confirmed the Medicines Control Agency would be issuing guidelines to clarify the 'grey areas' on promotional schemes for healthcare professionals.

"The NHS has a number of challenges over the next few months and they can all be faced best by working together," she said.

Other parties involved in the PPI have echoed Mr Kay's despair and surprise at the letter.

Junior health minister Baroness Jay, speaking at the BGMA dinner

Stephen Axon, general secretary of the Pharmaceutical Services Negotiating Committee, says the letter makes grim reading. "It says he [Mr Milburn] is thinking of alternative means of implementing the directive – that seems to me that patient packs have gone. It doesn't say 'alternative method of introducing patient packs'," he says.

He cautions that the letter may have just been drafted badly – but no one at the DoH has clarified the issue.

Duran Drive-Thru to expand nationwide

Duran Drive-Thru Chemists has been approached by two major pharmacy chains to take its innovative concept nationwide, according to Gurd Chahal, the pharmacy's owner.

But he has not committed himself to any one chain yet because he is examining the alternatives. These include expanding internally or franchising.

Mr Chahal's concept has attracted independent praise – it won the pharmacy section of last year's Switch Independent Retailer Excellence Award and is in the final again this year.

He says the drive-through idea could be applied to 50-100 stores around the country.

In *C&D's* November 8 issue, Mr Chahal inserted a classified advertisement that asked low turnover pharmacies with relocation potential to come forward. He says the response has been tremendous, with interested parties ranging from venture capitalists to community pharmacists who belong to buying groups.

"We have to identify how we could use the personnel resources [of the interested stores], bearing in mind there is a shortage of pharmacists. Do we use the same pharmacists and relocate them, or use different staff?" he says.

If a company had good information technology facilities and the right personnel, he adds, it could launch 50 drive-through stores in one year.

Mr Chahal will decide on his expansion strategy within three months.

CHEMIST & DRUGGIST 15 NOVEMBER 1997

Roger Odd, head of the Royal Pharmaceutical Society's practice division, says: "It is very late in the day to say it is something the Government cannot afford.'

Mr Milburn could argue, he says, that most of the negotiations involved the previous government. "Our annovance is that the same Doll officials were involved," he says.

Mr Odd says the Department's costing is a 'worst case scenario' and a guesstimate.

DoH officials are unable to shed more light on the matter. One told C&D that the PPI is not on hold, as some industrial commentators had feared; and that Mr Milburn merely wants to prevent PPI costs from escalating.

Whatever Mr Milburn's intentions, the way they were revealed is another public relations disaster to follow the debacle over the MCA's clampdown on inducements to healthcare professionals.

The Milburn letter

Alan Milburn's comments appear in a letter written by Jack Barnes, head of the Department of Health's industry division.

The letter, based on a meeting the minister gave, says that Mr Milburn "...thought that the phasing arrangements planned for the transitionary years - with the result that at different times during those years some medicines would be included in the initiative and others not the discretion proposed for pharmacists to 'round' their interpretation of the doctors' prescription to the nearest available pack of medicines, and the resulting complexity to the PPA systems, are worrying examples of this".

Estimated PPI costs of £60-70 million during the transition period are "... a very long way from the objective of 'no overall net cost to the public' on which the original plans for patient packs were discussed with the Government".

'Mr Milburn has made clear his strong preference for resources to be addressed directly to providing patient care wherever possible; and he is, therefore, now considering alternative means of implementing the directive."

The current proposals also leave various 'practical issues' unresolved. Mr Milburn concludes the initiative is not an improvement on the current system.

scheme Boots pilots new carousel dispenser

Boots the Chemists is piloting a motor-driven carousel that will enable its pharmacists to dispense 75-80 per cent of their prescriptions within two minutes.

The large carousel, filled with various patient packs, is situated behind the pharmacy counter. Instead of dispensing, the pharmacist turns the carousel and selects the pack he needs.

Steve Russell, BTC's managing director, says the initiative is a big development and is one of a number that it has on trial. Afl are designed to help the chain move pharmacy into the New Age. "We're now trying to understand the requirements of patients, which is why we are conducting trials in half a dozen stores" he says. "We want to liberate pharmacists to allow them to give more counselling services.

Other initiatives include patient counselling areas and offering clear therapeutic groups for OTC medicines.

BTC, meanwhile, sees more for expansion recently opening its 1,300th store, Lord Blyth, its chief executive, says the company could buy 40 stores a year for "the foresecable future". Mr Russell says the

company cannot give an exact figure on its maximum potential size. The chain is looking at various shopping locations around the country and studying its computer models to assess its future growth.

By the end of the year, BTC plans to have 21 edge of town stores and says the market has potential to hold 100.

The news comes as The

The new motor-driven carousel is meant to speed up pharmacist dispensing

Boots Company reported pre-tax profits up 5.9 per cent to \$253 unillion - excluding exceptionals - for the six months to September 30. Its turnover rose 12.7 per cent to \$2,328m.

BTC's profit grew 4.1 per cent to \$192m on sales of \$1,647m - up 7 per cent. ft fost about \$9m in potential sales when its stores closed for the Princess of Wales' funeral. The \$8.9m launch costs of the Advantage loyalty card also affected results.

Boots has issued 3.8 million cards and says it has been surprised by the level of applications, which has exceeded 4m. Sales linked to the card were 20 per cent higher than all sales at the end of last month. Women account for 93 per cent of the card holders and 40 per cent are under 40 years old.

The chain's healthcare sales rose 7.5 per cent during the first half, even though hayfever affected fewer people than normal, and despite the reclassification of B6 products.

Beauty and personal care sales rose 6.3 per cent, while sales in other areas grew 7.3 per cent. Sales of lunch products leapt 23 per cent.

New Coty address

Coty UK has relocated its offices to new, larger premises in Wimbledon at St George's House, 5 St George's Road, Wimbledon SW19 4DB, Tel: 0181 971 1300.

Weldrick acquisitions

The Weldrick Group - a pharmacy chain - has acquired T P Wheeler, which comprises two community pharmacies in Thurnscoe and Rotherham.

Flat cosmetic sales

Cosmetic sales were fairly flat in October, possibly because there were few large promotions, according to the British Retail Consortium. Skin care sales performed better, however, due to new products.

AAH/Lloyds relocates

AAH/Lloyds relocated this week to its new headquarters in Coventry.

DETTOL in the Home

In week three of DETTOL's Hygiene feature, we look at one of the most unhygenic rooms in the house the bathroom. Like the kitchen, the bathroom is constantly damp. which can make it an ideal breeding ground for illness-causing germs and bacteria. DETTOL Liquid (containing Chloroxylenol BP 4.8% w/v) starts to kill germs and bactetra in 30 seconds, meaning that the bathroom can be hygenically clean in minutes. When diluted correctly. DETTOL Liquid can be recommended to your customers for a vari-

- DETTOL Liquid can be added to the bath. as part of a hygiene routine
- For those suffering from scalp infections or dandruff, hairbrushes and combs can be cleaned with DETTOL Liquid to remove germs and bacteria trapped in the bristles.
- DETTOL Liquid should also be used regularly to remove the germs on exfoliating brushes and sponges.

Washing bands is one of the simplest ways to beat germs and help prevent infection. Your hands may look clean, but they carry 12,000 germs on the little finger alone. Therefore, it is important to regularly wash hands with an effective cleanser, such as DETTOL Antibacterial Liquid Wash, to reduce the risk of illness and infection.

Mirror, mirror on the wall ... This week Reckitt & Colman's DETTOL is oftening two pharmacists the chance to win a mirror set, perfect for the cosmetic section of your

To win a fabulous mirror set, simply answer the following question:

For how long do you need to properly wash your hands in order to reduce the risk of spreading germs?

a) At least 5 seconds b) At least 10 seconds c) At least 15 seconds d) At least 20 seconds

Send your answer on a postcard to: DET-TOL Hygiene Home Competition. C&D. Miller Freeman House, Sovereign Way, Tonbridge, Kent TN9 TRW by November 29.

Ruth Deech has been reappointed chair of the Human Fertilisation and Embryology Authority. Jane Denton is the new deputy chair. Professor Allan Templeton has been reappointed as a member. Professor Andrew Grubb has been made a member.

Fantasy pharmacist to manage new growth fund

Pharmacist Jayesh Manek, twice winner of the *Sunday Times* Fantasy Fund Manager competition, is the driving force behind a new fund management company launched this week.

Mr Manek, who is based in Ruislip, is an executive director of the new Manek Investment Management Ltd (MIML), with responsibility for fund management. Details of the company's first unit trust, called the 'Manek Growth Fund', are to be announced later this month.

The company's chairman is Stanislas Yassukovich CBE, a former deputy chairman of the London Stock Exchange. Crispin Money-Coutts, the head of international private banking at Coutts & Co, is a non-executive director.

Mr Manek's share-picking ability attracted the attention of Sir John Templeton, the founder of the Templeton Growth Fund. In July, 1995, Sir John asked Jayesh to manage \$5 million of his personal funds. He added a further \$5m in June last year. On October 31, this portfolio was worth over

\$13m and will be transferred into the new fund.

Sir John says: "I am very pleased that Jayesh Manek has decided to launch this fund. The portfolio he manages for me will be invested in the new fund and exchanged for units."

Mr Manek says: "The Manek Growth Fund will aim to consistently outperform stock market indices. I aim to keep the MGF fairly focused but flexible – the idea is not to diversify the fund very widely."

Last year, he was involved with the launch of India Value Investments (INVIL), a closed ended company which invests in the Indian markets (C&D July 26, p34). Readers wishing to register for a brochure should ring 0800 783 6060.

Pharmacist's son commended for foiling attempted robbery

A first-year pharmacy student at John Moores University in Liverpool has received a bravery award for foiling an attempted robbery at his father's pharmacy.

Lancashire's chief constable, Pauline Clare, presented Leo Jarvis with a certificate of com-

Leo Jarvis with a well earned drink following his recent brush with danger

mendation at Lancashire Constabulary in Hutton last month.

On a day off last September, Leo popped in to visit his father at his pharmacy in Ansdell, Lytham St Annes, when a masked intruder burst in.

The intruder was armed with a knife and threatened pharmacist John Jarvis, telling him to open the controlled drugs cupboard. His son, who was making a cup of tea at the back of the premises, heard the commotion and came to see what was happening.

Mr Jarvis and his son both attempted to disarm the assailant, causing him to flee from the shop. His son pursued the masked man down an alleyway and followed him to his home.

The man went inside and Leo stood guard outside until the police arrived at the scene shortly afterwards.

Since the incident, Leo has taken up the sport of kickboxing at university. Assistant Lyssa McGarrie of West Midlands Co-op Pharmacy in Kidderminster, Worcestershire, is November's Cambridge Counterpart champagne winner. Lyssa, who found the course enjoyable and interesting, is a keep-fit enthusiast and trains three to four times a week. She is pictured (centre) with pharmacist Olwyn Dobson and Whitehall

territory manager Ken Grigg

Pharmacists were guided through the complexities of the Drug Tariff at a workshop sponsored by Mawdsley-Brooks and Genus. Ian Jones, professor of pharmacy management at Portsmouth University, was the speaker at the event at the Hilton International Hotel, Manchester Airport. L-r: John Davies, Mawdsley's retail services director; Professor Ian Jones; Robert Harwood, Mawdsley's commercial director; Kieron Hardman, Genus' retail trade sector manager

How do they work?

The nicotine patch consists of a self-adhesive transdermal delivery system, and works by releasing a controlled daily amount of nicotine over a 16 hour or 24 hour period, directly through the skin, all the time it's worn.

Nicotine patches produce lower nicotine levels than smoking, but high enough to prevent withdrawal symptoms such as irritability, restlessness and anxiety. The patches allow patients to concentrate on overcoming the smoking habit, and benefit from avoiding chemicals in cigarette smoke including carbon monoxide and tar.

Which smokers are most suitable?

Clinical studies show nicotine patches should be recommended for:

- Moderately dependent smokers
 i.e. those smoking between 10-20 cigarettes per day
- Smokers with a regular smoking pattern
- Patients who prefer the convenience of a patch
- Patients who prefer not to chew gum
- Smokers who ideally have a low level of behavioural dependence on cigarettes

Correct treatment with nicotine patches has been shown to double cessation success rate, and significantly alleviate withdrawal symptoms compared to placebo.

Two types of patch are available — a 24 hour patch designed to be worn day and night, and a 16 hour patch which is applied first thing in the morning and removed at bedtime.

16 hour patch and 24 hour patch

The rationale behind the 16 hour patch is that it mimics the smoker's intake of nicotine which takes place over normal waking hours, and avoids night-time nicotine resulting in less sleep disturbance.

In studies comparing application of continuous 24 hour patches to 16 hour patches, both treatments are significantly better than placebo.

After four weeks, cessation rates were 39% for the 24 hour patch and 35% for the 16 hour patch. However six months later only 22% of the 24 hour patch users whilst 31% of the 16 hour users were still not smoking. (The study ended after four weeks.)

	Smokers			
	24-hour nicotine patch (n=51)	16-hour nicotine patch (n=55)	Płacebo (n=52)	
Smoking cessation rate:				
weeks 3-4	39% ^s	35% ^s	13.5%	
6 months	22% ^s	31% ^s	8%	
Global evaluation	68%	69%	30%	
(excellent/good)				

"The most remarkable finding.......is the low relapse rate among the participants on the wakeful hour treatment regime."

Importance of counselling

Following exceptionally high initial sales, there was a rapid decline in the nicotine patch market. This was attributed to massive media hype leading to high public expectations and an overall lack of consumer advice and understanding.

This emphasises the importance of pharmacy counselling to ensure the correct use and suitability of nicotine patches, as well as educating people that NRT is an effective aid for smokers who are determined to quit, although willpower is still the most important factor.

How to ensure correct use

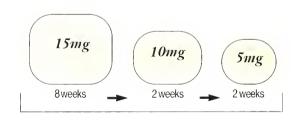

It is important that customers are made aware of the patch reduction programme. They should be reminded that any form of NRT is not recommended for long term use, but only as a temporary relief until the psychosocial factor of dependence has been reduced.

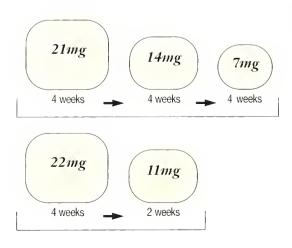

16 Hour Patches

The 16 hour patches are available in three strengths - (15mg), (10mg) and (5mg). People who smoke more than 20 cigarettes a day, should start on the 15mg strength patch the day after they stop smoking completely. After eight weeks, they should reduce their nicotine intake by using the 10mg patch for two weeks, followed by the 5mg patch for a further two weeks - when they should be able to manage without patches or tobacco.

24 Hour Patches

There are two types of 24 hour patch. One consists of a three month reduction programme and is available in three strengths - 7mg, 14mg and 21mg. The other consists of two strengths, 11mg and 22mg and is reduced over a period of six weeks.

Who are nicotine patches unsuitable for

• Patients who have a moderate level of behavioural dependence

Unlike the gum, the patches cannot be used in response to an urge to smoke, or offer any behavioural substitution to smoking.

• Patients who are infrequent smokers

The patches supply a constant stream of nicotine into the bloodstream.

- Women who are pregnant or breast feeding
 - Patients who are allergic to nicotine or develop an allergy to the adhesive in the patch
 - Patients with widespread dermatological conditions
- Patients who smoke less than 10 cigarettes a day

They are less likely to be addicted to nicotine, especially those who smoke fewer than five cigarettes a day.

Tharmacy advice

• Check if customer is taking any other medication

Whether or not NRT is used, stopping smoking may alter the pharmacokinetics of several drugs and require dose adjustment. Drugs which may be affected include paracetamol, caffeine, imipramine, oxazepam, pentazocine, propranolol, theophylline and insulin.

• Determine if nicotine patches are a suitable form of NRT

Ascertain smoking pattern and the number of cigarettes smoked per day. All forms of NRT are not suitable for children.

• Explain the importance of completely stopping smoking whilst using the patch

Using nicotine patches whilst smoking can produce a higher frequency of adverse effects than normally experienced and can result in nicotine overdose. Other nicotine products should not be used at the same time as the nicotine patch.

 Ensure customers are aware of the correct use and encourage compliance

Smokers are more successful if they keep to the reduction programme and use the patch correctly.

How to apply the nicotine patch

16 hour patch users only: Apply a fresh patch first thing in the morning. Remove the patch before you go to bed.

24 hour patch users only: Apply a fresh patch each day. Wear the patch day and night at all times.

All patch users: Choose a clean, dry, hairless area of the skin either on the upper arm or thigh - change site each day. To avoid irritation, do not to use the same area for two consecutive days. Avoid any area of skin which is red, cut or irritated.

Do not apply oil or powder to the area of skin where you apply the patch, as this will prevent sticking.

You should never use more than one patch at a time.

Dispose of the used patch carefully. Fold in half and place in the household rubbish.

Do not smoke whilst using the patch.

Keep out of the reach of children.

Make customers aware of any side-effects you feel appropriate

The most common adverse effects are transient and reversible. Skin reactions such as itching, burning, and erythema or redness at the site of application may occur.

Some patients may experience transient adverse reactions which are actually nicotine withdrawal symptoms such as headache, dizziness and sleep disturbances.

 Patch should be used with caution in patients with the following conditions – advise to consult doctor before use:

Cardiovascular disease

Peptic ulcer disease

Those taking medication which may require dose adjustment

All forms of nicotine are contra-indicated throughout pregnancy as the blood carries nicotine to the baby. Similarly nicotine is excreted in breast milk so should be avoided if breast feeding.

Nicotine patches are most suitable for moderately dependent smokers (between 10-20 cigarettes per day) with a regular smoking pattern. They are part of a range of NRT options available, allowing you to select the most appropriate product for your customers' individual needs. It is important to remember NRT is most effective when accompanied by appropriate counselling and support.

This series consists of five parts which will culminate in a multiple choice questionnaire. For spare copies of the individual inserts and a free binder please write to FREEPOST MK15-11, Consumer Healthcare Division, Davy Avenne, Knowlbill, Milton Keynes MK5-8PH.

Use your influence

hy is it that people no longer suffer from colds? It seems everyone who comes into the pharmacy looking for a cold cure believes they really have flu. As pharmacists, your likely response is: "If you had flu, you would soon know about it"

The question, then, is how to help the British public recognise the potentially serious nature of flu, and not confuse it with the 'common' cold? There are several organisations which can help.

The Association for Influenza Monitoring and Surveillance, [AIMS] sees raising awareness about the Department of Health's recommendations on flu vaccination and encouraging those at risk to get vaccinated as its responsibility. The DoH vaccination campaign started this week.

The work of AIMS has been complemented by two further initiatives. The Doctor Patient Partnership's latest campaign launched in September is advising people to be well prepared for the cold and flu season

Also last month, the Proprietary
Association of Great Britain
announced the launch of the
Consumer Health Information Centre
(CHIC) Its first campaign focuses on
colds and flu with a cartoon
character making the point

sign of a cold. And the recently restructured Patients' Association has made flu one of its featured items on its internet site.

CHIC points out that symptoms of flu which distinguish it from a cold include: sudden or rapid onset of symptoms; high temperature, chills and fever, headache; weakness and aching muscles; and loss of appetite

Further signs indicative of flu are a painful, unproductive cough, eyes that ache and are intolerant of bright light, and a general grogginess, says Malcolm Stacey in his book "Atishoo!"

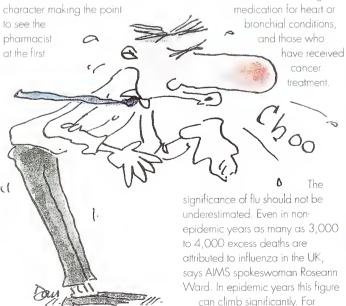

So what is the consensus of advice of all these agencies? Get a flu jab. The DoH says annual influenza immunisation is strongly recommended for adults and children with any of the following:

- chronic respiratory disease, including asthma
- chronic heart disease
- chronic renal failure
- diabetes mellitus
- immunosuppression due to disease or treatment, including asplenia or splenic dysfunction

Old people in nursing and residential homes or any long stay accommodation are recommended for vaccination.

Other groups who should be considered are those on regular medication for heart or

example, in 1993

Ebenezer Sneezer. This lorable 'geezer' features in CHIC literature and press materials during the campaign

there were 13,000 excess deaths and in 1989-90 the figure was 29,000.

Complications generally result from bacterial infections in the lower respiratory tract. Pneumonia can follow, usually caused by pneumonococcal bacteria, but infections with staphylococci, streptococci and Haemophilus influenzae type b can occur.

In the young, there may be onset of the neurological disease Reyes syndrome in a very small number of cases (three children per 100,000). The first signs are nausea and vomiting, but there may be progressive mental changes, such as confusion or delerium.

"Evidence shows that the risk of serious complications and death associated with influenza can now, by and large, be avoided with repeated annual flu vaccination," says Ms Ward. "Therefore the importance of flu vaccination for 'high risk' patients cannot be emphasised enough."

Dr Simon Fradd, chairman of the DPP says research shows influenza vaccination reduces hospital admissions for pneumonia, influenza, bronchitis and emphysema by as much as 63 per cent. However, it is estimated that only about 40 per cent of those identified as being at risk actually receive the injection.

This year's strains of vaccine, announced back in March by the World Health Organisation, are:

- an A/Wuhan/359/95 (H3N2)-like strain
- an A/Bayern/7/95 (H1N1)-like strain
- a B/Beijing/184/93-like strain The first of these was responsible for many cases of flu last season. This peaked at 230 cases per 100,000 population in January, higher than expected, but short of an epidemic says Dr Fleming.

Media epidemic

For the media, every year seems to be an epidemic year, but what makes an epidemic? The DoH defines:

• 'epidemic' influenza as where the incidence is greater than 400 cases per 100,000 population

- 'higher than expected' influenza is where there are 200-400 cases per 100,000 of the population
- 'normal winter activity' where there are 50-200 cases per 100,000 population
- 'baseline' influenza as less than50 cases per 100,000

Pandemics are influenza outbreaks on a global scale. They usually result from a sudden major change in the antigen proteins – haemagglutin and neuraminidase – coating the flu virus. Haemagglutin molecules are particularly unstable and can mutate in replication leading to 'antigenic shift'.

Antigenic shift is not common, but there have been at least five pandemics this century. The pandemics of 1957 Asian flu and the 1968 virulent Hong Kong strain are examples of antigenic shift. People were not protected from the 1968 strain as there had been a significant modification from the 1957 strain, affording no immunological protection.

The most recommended lozenge in pharmacy - because you say so. And say so.

It's no coincidence that when it comes to sore throats, Merocaine is the most recommended throat lozenge¹ - because nothing has been clinically proven to relieve sore throats faster.²

And thanks to you, your customers have found the effective relief they need.

And say so.

It's the powerful, dual action combination of Benzocaine, a strong local anaesthetic to relieve pain, together with Cetylpyridinium Chloride (CPC), a fast-acting anti-bacterial agent, which produces such impressive results. In fact, Merocaine's powerful antimicrobial efficacy is clinically proven to achieve a 99% reduction of the most common oral pathogens within 5 minutes.

For severe sore throats, Merocaine should be your number one recommendation, because Merocaine provides fast, effective relief for your customers - and a good Profit on Return for you.

Merocaine[®]

For sore throats, make Merocaine your No1 choice.

Merocaine Lozenges Product Information: Active Ingredients: Cetylpyminigning to Blourde 1.4 mg, Benzon and close of the pain and clo

Last winter, the total cold market only just kept ahead of inflation. Will this year be so bleak? We report on plans to boost sales in the cough and cold market this season

t seems that not enough people suffered from colds last year. There was no second peak in January or February, and the onset of the winter cough, cold and flu season in October was short lived. Although they won't admit it, manufacturers were disappointed by the robust nature of the nation's cold-fighting constitution.

Warner Lambert Consumer
Healthcare agrees that the last
season was flat due to the low
incidence of severe cough and
cold symptoms. The cold and flu
market declined 3.5 per cent and
hit stronger medicines, as symptoms
were not so severe. Even so, the
cough, cold and decongestant
combined category was worth
£229 million (Nielsen, MAT
December 1996, in all outlets).

Pharmacy sales accounted for 72 per cent of this market, with cough medicines forming the principle portion of the category, worth £74m or 45 per cent in pharmacy Cold and flu medicines and decongestants then split more or less equally, accounting for £46.7m (28 per cent) and £44 2m (27 per cent) respectively.

Even though there are more than 250 pack variants within the cough and cold market, 50 per cent of sales are made through the top 25 SKUs, says WLCH. More importantly for the company is that its Benylin Adult Cough range remains a star performer, taking one third (33.9 per cent) of adult cough market in the pharmacy (INielsen Jan/Feb 1997).

Research shows that purchasers want the package to aid product identification and selection. It must also clearly communicate and have an attractive design. Taking this on board, the new look Benylin has started to move away from its 'prescription look', says senior product manager Carlton Lawson.

The recent launch of the Benylin Children's range is considered a new beginning by Mr Lawson. With children's cough medicines

The Benylin Adult Cough range remains a star performer in the market

accounting for about £8m or 15 per cent of the total cough market, the sector is becoming increasingly important.

Mr Lawson believes the new range of sugar-free and colour-free Benylin represents what the consumer and pharmacist expect from paediatric cough medicines.

The new range has seen the consolidation of the children's Actifed and Benylin ranges with just one extra SKU. Packaging has also been designed with clear, colour-coded graphics

So what is the marketing strategy for Benylin this year? For Benylin Adult, the tenor Antonio Negore will be singing on your screens again until February in a £3.5m campaign that will be seen by 84 per cent of the target audience. In addition, London is to get a radio campaign in December and January.

For Benylin Children's, you should have already seen the £1m national press campaign which is running until February. WLCH is confident that three quarters of the target audience – mothers of young children – will see the message at least five times.

Benylin 4-Flu Hot Drink, launched last year, grew significantly despite the absence of viruses. It is claiming top position among the Pharmacy-only hot drink's line and by February was number two hot lemon drink after Lemsip.

The bed and bars advert is being brought back for this season with a £2m national television spend in December and January, as well as consumer press advertising.

Among WLCH's other winter remedies is Sudafed which takes pole position in the decongestant

sector with a 21 per cent share. Among oral decongestants, Sudafed achieved its highest ever share of 41.6 per cent, growing over 3 per cent in 1995-96 and 1996-97

Last year's promotional techniques will be repeated, including the 'crossword' adverts in the national press in January and radio adverts from December. There is also a £250,000 winter windows campaign with giant cartons for window display and new WLCH counter units being distributed to pharmacies in January. Patient leaflets will also be distributed this season.

Calpol has claimed the position of being the fourth largest brand in pharmacy, says WLCH. It is also a major player within the £22m paediatric analgesic market with a 71 per cent share (Nielsen May/June '97 IMS OTC Report).

Calpol Six Plus is driving the growth of the market overall, upping its value share from 65 per cent last year to 71 per cent this year. Calpol Six Plus Colour Free Sugar Free has grown 18 per cent over the year and accounts for 60 per cent of Calpol Six Plus sales.

The brand will continue to be supported over the winter with an advertorial campaign running in parenting titles.

Grocery v pharmacy

Despite pharmacy having access to the strong acting brands, Novartis Consumer Health is advising pharmacists to be aware that growth in grocery sales is far outstripping growth in pharmacy.

Nielsen figures give pharmacy a three-quarters share of the £70m cough remedies market, but sales only grew 0.7 per cent in the year to April 1997. For grocery, the growth rate was 13.6 per cent.

In the cold and decongestant sector market, the changes have been even more pronounced.
Sales through grocery increased

Novartis will continue its support for Tixylix with a four-month TV campaigu

Continued on P8

Effective and fast relief for headache

eadaches vary both in severity and pathophysiology. However, all but the most severe of headaches are usually suitable for self-medication. Because OTC analgesics are so widely used for headache relief, pharmacists are often asked to advise on their use. Aspirin or paracetamol are still routinely recommended, though evidence shows that ibuprofen, the active ingredient in Nurofen, offers advantages over both.

Superior headache relief

Eleven clinical trials have investigated the role of ibuprofen in headache pain relief. Two pivotal studies demonstrate the clinical effectiveness of ibuprofen. Ibuprofen 400mg was demonstrated to be superior to aspirin 650mg and paracetamol 1,000mg in providing headache pain relief1. Another study compared ibuprofen 400mg, paracetamol 1,000mg, aspirin 650mg and 1,000mg². Once again, ibuprofen was shown to be significantly more efficacious in reducing headache pain.

Fast relief

As can be seen from the graph below, headache relief began within 15 minutes of taking the tablets¹. Other studies have

demonstrated that ibuprofen provided significant headache pain relief in 15 minutes^{2,3}.

There is good evidence to show that ibuprofen is effective in a wide range of headaches, particularly tension headache, migraine and headaches associated with cold and flu.

Excellent tolerability

A review involving 46,000 patients compared the adverse event profiles of ibuprofen and other OTC analgesics; paracetamol and aspirin⁴. The study found that upper Gl bleeding associated with aspirin was greater than that associated with ibuprofen, and that the incidence of adverse

events associated with ibuprofen were similar to that found with placebo or paracetamol¹. A second analysis of published reports for adverse events for ibuprofen and paracetamol was carried out. This showed

no statistically significant differences in the reports of adverse events in any of the major organ systems⁵. This was irrespective of the type of adverse event reported, and the overall frequency⁵.

Safer in overdosage

Ibuprofen and paracetamol both have favourable adverse event profiles. However, in overdose ibuprofen has such low toxicity that a recognised lethal dose has not been established. This contrasts with the toxicity profiles of aspirin and paracetamol.

"When the safety of a drug in overdose is considered, substitution of aspirin or paracetamol by ibuprofen may actually reduce the overall risk for the population."

Nurofen an ideal choice

Effectiveness. Speed of action. Good tolerability. All important factors to consider when making a headache recommendation – and all factors which Nurofen has a proven clinical record of fulfilling.

Patient Information Each tablet contains 200mg Ibuprofen BP. Indications: effective in the relief of headaches, cold and flu symptoms, rheumatic and muscular pain, backache, fever, migraine, period pain, dental pain and neuralgia. Dosage and administration: adults and children over 12 years: initial dose two tablets, taken with water, then if necessary one or two tablets every four hours. Do not exceed six tablets in any 24 hours. Precautions and warnings: as with some other pain relievers, Nurofen should not be taken by patients with stomach ulcers or other stomach disorder or hypersensitivity to ibuprofen. Patients receiving regular medication, asthmatics, anyone allergic to aspirin, and pregnant women should be advised to consult their doctor before taking Nurofen. In normal use, side-effects are very rare, but may occasionally include dyspepsia, gastrointestinal intolerance and bleeding, and skin rashes. Not recommended for children under 12. If symptoms persist for more than three days, patients should consult their doctor. Product licence number: 0327/0004. Licence holder: Crookes Healthcare Ltd, Nottingham NG2 3AA. Legal category: P (12s GSL). Prices: Nurofen 12s, £1.45; 24s, £2.69; 48s, £4.85; 96s, £8.25. Prices correct at time of going to press.

◀ Continued from P6

9.7 per cent to take a 42 per cent share. Pharmacy sales declined 2 per cent

Within the children's cough sector there was a 3 per cent down turn, but Novartis is pleased to report that sector leader Tixylix grew 6.8 per cent in value and 2.4 per cent in volume year on year (Nielsen MJ '97). Novartis assistant brand manager Harriett Player says that the company will continue its support for Tixylix to combat the launch of Benylin Children's range

Last year, Tixylix Night-Time continued to be its main seller, but the sugar-free formula increased its share, helped by the coffee-time television advertising campaign

Having achieved a brand awareness of 89 per cent and a 44 per cent share of the children's cough remedy market, as well as a 58 per cent level of advert recall, Novartis will be continuing its Tixylix strategy

This season will see a four month television campaign starting next month. Pharmacy assistant education will also feature in trade advertising. One other change pharmacists can look out for with the brand is a repositioning of Tixylix Catarrh.

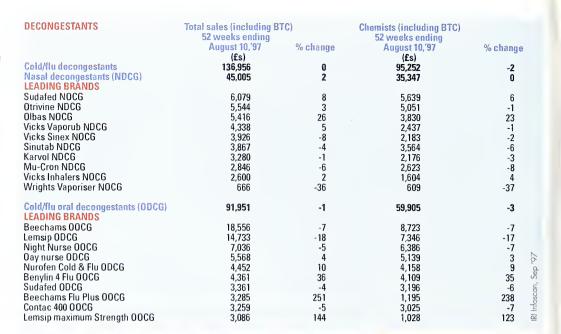

In the topical decongestant market (inhalants, sprays, drops and rubs), there was a 1 per cent increase in value, but a 2 point drop in volume. Looking at drops and sprays, the grocery sector has a slight edge on pharmacy worth

Do-Do Chesteze: customer loyalty

Mn-Cron: SB wants to shift the emphasis from its decongestant image

Otrivine takes the lion's share of the pharmacy topical decongestant market

£8.6m and £8.2 m respectively. But within pharmacy, Otrivine takes the lion's share with 61 per cent value, compared to Vicks Sinex at 24 per cent, Fenox at 6 per cent and Sudafed Spray at 2 2 per cent (Nielsen MA '97).

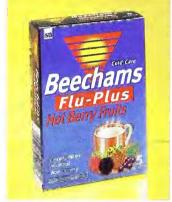

For this reason Otrivine is seen as one of Novartis' Eurabrands – one of its special products that will receive considerable financial and developmental support. Among the £200,000 cansumer promotion next year will be a sampling programme as well as women's press advertising.

The systemic cold and flu remedy sector, worth £61m, also suffered last year falling 3 per cent in value and 7 per cent in volume. Among the powerful medicines, Mu-Cran saw a decline of 2.5 per cent in value.

The brand is worth £33.2m at RSP and, accarding to Novartis, is worthy of more trade support. Novartis believes that pharmacists could look at individual SKUs to see how they are selling. Some of the larger packs of cold and flu medicines may not be earning their shelf space.

Night and Day Nurse claims the number one spot for P lines

Beechams Flu Plus - a key player

Part of the Mu-Cron strategy will be to target females aged 25-35 in social groups ABC1, wha are perceived as the healthcare providers in the family. There will also be a shift in emphasis for Mu-Cron away from its decongestant image to that of a powerful cold and flu remedy.

As for Do-Do Chesteze, Ms Player says there is still strang consumer layalty, with chronic sufferers relying on it throughout the year. The £2m brand will continue to be supported by targeting consumers with branded offers.

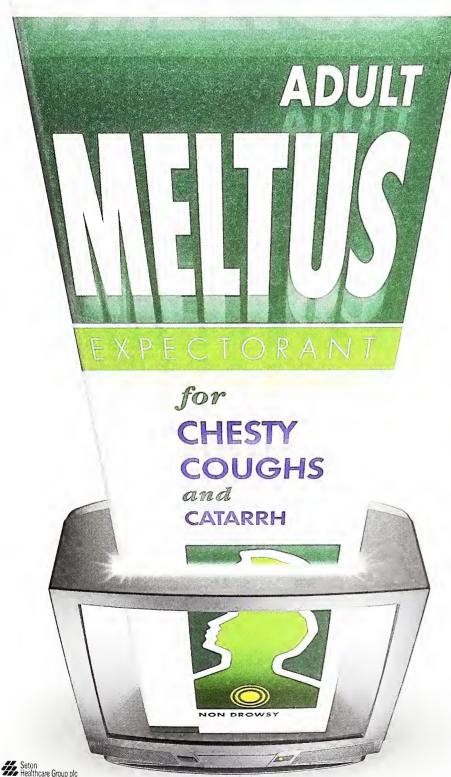

Cold comfort

Despite the total cold market only just keeping ahead of inflatian last winter, independent pharmacists may take some consolation that although the pharmacy share at £44.7m was only up 2 per cent, Boots share at £24.4m was down 4 per cent (Nielsen Total Market Summary MAT Jan/Feb 1997).

Smithkline Beecham is a key player in the cold and flu oral decongestant market with a 40.8

ABBREVIATED PRODUCT INFORMATION.

Tixylix Catarrh¹

For the relief of chesty coughs, catarrh and nasal congestion. Dosage: Children 1-5 years 5 ml, children 6-12 years 10 ml. Administer four times a day. Not for children under 1 year of age. CI: Hypersensitivity, acute porphyria. Precautions: Caution in those having conditions aggravated by anticholinergic therapy, severe liver disease, severe kidney disease, severe lung or heart disease, asthma, thyroid disease or depression. Use with caution in those with hepatic failure. SE: Sedation is the most common effect. Occasionally, allergy, anaphylaxis and anticholinergic effects, tremors, paradoxical excitability, rash, Interactions: Tricyclic antidepressants, hypnotics, anxiolytics or antihistamines. P. PL 0427/0049. PL Holder: Rosemont Pharmaceuticals, Braithwaite Street, Leeds

Tixylix Night-Time / Tixylix Night-Time SF' For the symptomatic relief of cough and colds in children; especially useful for irritating night cough. **Dosage**: Administer two or three times a day. Children 1-2 years 2.5 ml, children 3-5 years 5 ml, children 6-10 years 5 to 10 ml. CI: Hypersensitivity. Precautions: Caution in asthma, cardiovascular disease and epilepsy. If symptoms persist for more than 7 days consult a doctor. SE: Drowsiness can occur but this is not considered an undesirable effect. Other effects could include dry mouth, headache, fatigue, dizziness, palpitations, stomach upset and rash. Interactions: Alcohol, tricyclic antidepressants, hypnotics, anxiolytics antihistamines or opioid analgesics. P PL 0030/0080 & PL 0030/0081

Tixylix Inhalant²

For the relief of head colds, catarrh, flu and hayfever. Administration: Babies 3 to 12 months: sprinkle contents onto a handkerchief. Place out of reach of the baby. Children 1 year and over: sprinkle onto bed-linen, pillow or night-wear at night. Tip the contents of one capsule into a pint of hot water and inhale the vapours. Always use under parental supervision CI: Hypersensitivity. Precautions: For external use only, avoid direct contact with the skin, eyes or nostrils. GSL. PL 0030/0083.*

Tixylix Daytime¹

A cough suppressant. **Dosage**: Administer six hourly as required. Children 1-2 years 2.5 ml, children 3-5 years 5 ml, children 6-10 years 5 to 10 ml. **Cl**: When cough suppression is inadvisable. **SE**: Nausea and drowsiness.

Tixylix Chesty Cough

Relief of chesty coughs, hoarseness, and sore throats. Helps loosen mucus to make breathing easier. **Dosage**: Administer 4 hourly. Children 1-2 years 2.5 ml, children 3-5 years 5 ml, children 6-10 years 5 to 10 ml. **Precautions**: Should not be taken with a cough suppressant. GSL. PL 0030/0082.*

Tixylix Cough and Cold

Cough suppressant and decongestant. Dosage Administer six hourly as required. Do not exceed three doses in 24 hours. Children 1-2 years 2.5 ml, children 3-5 years 5 ml, children 6-10 years 5 to 10 ml. **Cl**: Hypersensitivity, tachycardia and severe cardiac disorders Those taking monoamine oxidase inhibitors or have taken monoamine oxidase inhibitors in the last two weeks. Not recommended during an acute asthmatic attack. Precautions: Caution with epilepsy, severe diabetes mellitus, hyperthyroidism and hepatic insufficiency SE: Drowsiness can occur but this is not considered an undesirable effect. Other effects could include dry mouth, headache, fatigue, anxiety, restlessness, dizziness, stomach upset, palpitations, tachycardia and rash Interactions: Monoamine oxidase inhibitors tricyclic antidepressants, hypnotics, anxiolytics, antihistamines, decongestants, or opioid analgesics. P. PL 0030/0089.

⋖ Continued from P8

per cent share. Within pharmacy, the share is 38.2 per cent and is worth £25.7m (IRI Infoscan 52 weeks ending August 10, 1997).

Beechams remains the number one cold and flu oral decongestant and the number ane GSL brand in pharmacy (Nielsen TMS MAT Feb '97).

Not resting on its laurels, the Beechams range has been extended, with a Beechams Throat-Plus and the new Hot Berry Fruits variety in the Beechams Flu Plus range.

The brand will benefit this season from a £4m television spend running from November to February.

For its Night and Day Nurse products, SB claims number one P line taking a 17.8 per cent share, "despite a highly competitive environment". The brand will be supported with a total media spend of £3m commencing in December.

Another important player in SB's decongestant arsenal is Contac 400, holding a 4.7 per cent share of the pharmacy cold market. It is also SB's biggest worldwide respiratory tract brand

Next year, Veno's will also be brought under the Beechams umbrella. Stuart Hutton, product manger for Beechams and Venos, believes that the Beechams name is very credible across cold and flu, and by identifying Venos as coming "from Beechams" the umbrella brand will also be identified with cough remedies.

Thornton & Rass is celebrating the success of last year's Covonia radia advertising campaign which has boosted brand awareness to 37 per cent.

This year will see £500,000 spent on a new national radio campaign. "It seems that hearing the name, rather than seeing it in print, actually helped to encourage people to ask for Covonia by

name when they had previously just pointed it aut on the shelf," says marketing manager Caroline Wheeler.

Power to your sales

With the launch of lemsip
Powercaps in the summer, Reckitt &
Colman strengthened the
pharmacy presentation of lemsip.
The Powercaps join lemsip
Power+ hot medicine, lemsip Flu
Strength Pseudoephedrine Formula
and lemsip Max Strength.

The whole range is being supported with a £4 million marketing campaign, including £3m to be spent on television advertising for Lemsip Max Strength. This product has been one of R&Cs most successful launches with the product taking a 4.5 per cent share of the total cold and flu market in its first two years (Nielsen 1997).

Windsar Healthcare says its Hill's Balsam portfolio shawed strang growth with 1997 sales up 30.5 per cent year on year, despite a drop in pharmacy sales of 2.3 per cent (MAT Feb '97).

A booklet for parents and carers of young children has been issued by Hill's. 'New Arrivals – A parent's guide to winter health'. For a copy, send an A5 SAE to Hill's Balsam/Winter health, New Arrivals affer, PO Box 193, Nottingham NGS 2HA

Nurofen Cold & Flu enjoyed its most successful in 1996/97 despite the lowest cold and flu incidence for four years, says Crookes. In early spring it was claiming its highest share of the systemic market since launch at 4.8 per cent (Nielsen May/June 1997).

Crookes believes that the tablet sector of the £103m systemic cold and flu market, is the fastest growing sector up 15.9 per cent year on year (Nielsen, AGB data).

A TV cammercial for Nurofen Plus will be on air from Navember 10 until December 1. This campaign is part of a total £10

Sugar-free products are drawing new consumers – particularly women – to the medicated confectionery shelves. Sarah Thackray reports on this fast growing sector

Sweet on Sugar-free

anufacturers of throat treatment products have been surprisingly slow to jump onto the sugar-free bandwagon. The challenge has been to develop sugar-free products which are both efficacious and pleasant tasting.

Although the sugar-free sector accounts for only 2.2 per cent of the UK throat treatment market, it is growing at a rate of 56 per cent year on year (Nielsen MA '97).

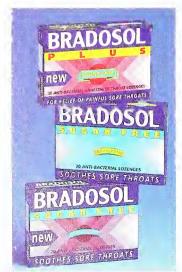

In other parts of Europe, sugarfree takes a 38 per cent value share of the total throatcare market (source: BHI, Spain). Holland and France see value shares of 27 per cent and 25 per cent respectively.

Tricia Pedlar, Marketing Manager for Strepsils at Crookes Healthcare, says: "Sugar free quickly becomes a significant sector in the market, rather than remaining a niche."

Strepsils Sugar Free is Crookes' latest addition to the range for dry, itchy and irritating throats. It contains the sugar substitute isomalt and two antibacterials.

Healthy choice

Ms Pedlar says it will appeal to people with diabetes, those controlling their sugar intake and

Sugar-free Bradosol Plus Health targets health conscious and diabetic consumers

parents who wish to give their child a sugar free product.

Crookes research shows consumers believe the variant to be pleasant tasting and efficacious.

A £2 million support package for Strepsils includes the 'Apple' TV commercial for the core brand with a 10 second announcement for Sugar Free used to top and tail the advertisement break

Sugar-free medicated confectionery is helping draw new consumers – particularly women – into the marketplace according to Warner-Lambert Confectionery.

Sophie Wright, senior product manager for the company, says: "mums have responded particularly positively to the new Halls Mentholyptus Cherry Sugar-Free variety – both as a purchase for themselves and their families."

This sugar-free variety followed the success of Halls Mentho-Lyptus Original Sugar-Free which is now worth $\mathfrak L$ 1.3 million.

Growth can also be anticipated in the sugar-free throat remedy sector this winter following the launch of Beechams Throat-Plus.

This sugar-free, lemon flavoured 'pressed tablet' lozenge has a triple action formulation which is 'anti-bacterial, anaesthetic and soothing/cooling.' Its active ingredients are hexylresorcinol and benzalkonium chloride.

Smithkline Beecham say that medicated confectionery is the first port of call for sore throats and 90 per cent of consumers prefer lozenges.

The launch of Beechams Throat-Plus is being supported with a £1.4 million TV campaign from December to February, and giant POS packs.

Sugar-free success

Novartis reports 18 per cent growth for its sugar-free Bradosol Plus brand in the total pharmacy lozenge market (Nielsen MA '97)

The company plans to increase awareness of the brand with consumer sampling and an

The Strepsils range now includes a sugar-free variant

advertorial campaign targeting health conscious and diabetic consumers. Its strategy also includes increasing distribution of the Cherry Menthol and Sugar Free Plus variants.

Swiss manufacturer Ricola reports that the sugar-free variants of its herbal cough lozenges now account for 40 per cent of the brand's volume sales.

The company has seen steady growth in pharmacy sales over the past two years with television promotion of its herbal lozenges. The formula will be repeated for this season, with a TV campaign kicking off on Christmas Day.

Research by Ernest Jackson shows consumers generally prefer Throaties without the sugar coating. The company has relaunched the brand without its sugar coating and in a flowwrapped blister pack.

The relaunch is supported by a £500,000 national advertising campaign in young women's magazines.

Merchandising tips

Mars Confectionery says that medicated confectionery is typically bought on impulse by consumers suffering early signs and during the symptoms of cold and flu, as well as during the cold season. It recommends that, to optimise sales, pharmacists should:

• Site medicated confectionery by the till and beside other cold and flu and personal care products to

Beechams Throat Plus is a new sugar-free lemon flavoured lozenge

Sugar-free variants take 40 per cent of Ricola's volume sales

maximise impulse/distress purchases

• take into account that flavour is a strong consideration for selection and provide a wide range.

Blackcurrant is the most popular flavour for medicated confectionery – accounting for

Seton Healthcare. Tel: 0161 654 3000.

Breathe in

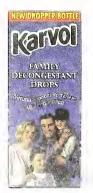

nhalant decongestants are one of the areas showing strong year on year growth, even with last year's shorter intense period of symptoms.

Eoch year for the post five years, the sector has seen increasing growth, with annual increases starting at 10.3 per cent year on year for 1992 to 13.7 per cent for 1996 (Nielsen AGB and Crookes' estimates).

Within the category, products can be split into the poediatric type, such as Korvol and Snufflebabe, and adults, such as Olbas and Vicks. Olbas takes the lead with o 33 per cent share, followed by Vicks Vaporub at 29.4 per cent. Karvol, the third largest brand is also the largest paediatric brand with a 25.5 per cent share

Olbas has a 33 per cent market share

Karvol's main TV advertising took place between midnight and 6am

of the total inholant decongestant market.

GR Lane's marketing director
Vere Awdrey is particularly proud
that Olbas has gone to leodership
position accounting for 40.2 per
cent brand share in pharmacy
equivalent to 2.5m bottles. Part of
the brand's success is due to last
outumn's launch of the Olbas
Inhaler Stick. In its first eight months
it took a 4.2 per cent share of the
phormacy decongestant market.
And with overall market volume
growth of less than 1 per cent,
Olbos grew 10 per cent.

Mr Awdrey acknowledges that the launch of Karvol Drops this season will put pressure on the other inhalants, but adds that the line extension is made within a very mature market.

Lanes is supporting Olbas with POS material and £0.5m worth of national media advertising. The inhalant stick will be specifically promoted in youth magazines.

Crookes' Karvol Drops have been introduced to allow family usage of a well known brand. The new line is targeted at the family.

Crookes says new mothers prefer to have a pre-meosured dose of any medicine for their infant. As such, the dropper bottle provides an alternative formot, although Karvol Capsules will remain the recruiter to the brand.

Korvol odvertising moy appear to be discreet if non-existent, but last year's television campaign grew brand awareness in the target market to 88 per cent. So where was this effective odvertising? Between midnight and 6am on the television, the peak time to target parents nursing infants who cannot sleep due to congestion.

Crookes is plonning to repeat this targeted campaign in January and February with over 1,000 advertising spots amounting to nine hours of screen coverage. This will be supplemented with a sampling campaign and leaflets through parenting magazines.

Mothers can expect to receive a scratch and sniff card sent out when registering for baby packs.

Novartis' Rhinomer, launched this summer, uses isotonic seo water in spray form to loosen mucus. It is prepared from seawater sterilised by ultrafiltration and made isotonic by electrodialysis to remove excess sodium chloride. It is buffered to the optimal pH 8.2 for efficient nosal cilia oction to remove mucus.

Rhinomer comes in three forces of spray. Besides being useful for unblocking the nose, Rhinomer Baby can help normal feeding and sleeping patterns to be restored, says Novartis. Rhinomer Medium could be suitable for typical rhinitis symptoms whether due to colds or hay fever and Rhinomer Strong may be used in occupational

There are three Rhinomer sprays

rhinopathy, suffered by people working with dust or solvents. GR Lane Health Products Ltd. Tel: 01452 524012. Crookes Healthcare Ltd. Tel: 0115 953 9922. Novartis Consumer Health. Tel: 01403 210211.

Winter worries

Hypothermia was the underlying cause of death af 291 pensioners in the winter of 1994. Excess deaths in England and Wales in winter were 19 per cent above the year-raund average in 1991. Over 750,000 older people live in homes that put them at risk af hypothermia.

Gloomy facts, but samething can be dane about them. For ten years, the 'Keep Warm, Keep Well' campaign has been trying to reduce the figures by giving advice on keeping out the cold. This means preventative health measures as well as giving practical advice on insulating the home and help with heating casts.

The campaign is a partnership between Age Concern, Help the Aged, NEA (the national energy action charity), the Department of Health and the Benefits Agency. It provides a range of information services including a free telephone helpline and distributes over a million booklets each year. The 'Winter Warmth Line' (0800 289404) has handled over 150,000 enquiries over the past decade.

Among the advice KWKW recommends for the vulnerable is to try to keep a constant temperature af 21°C

(70°F) in all roams, including the bedroom and passages. If this is not possible or affardable, keep one room warm, but pre-heat the bed and bedroom far several haurs befare retiring at night.

The elderly are also advised to make sure they have same hot food and drink during each day, and to take a little exercise if possible. People should also wrap up warmly with a scarf, hat and glaves before going out, no matter how shart the trip.

Free capies of the KWKW advice baaklet are available in English, Chinese, Greek, Palish, Turkish, Bengali, Gujurati, Hindi, Punjabi and Urdu fram: 'Keep Warm, Keep Well', Freepast 3124, Wetherby, West Yarkshire, LS23 6YY. A Welsh versian can be abtained by writing ta Age Concern Cymru, 4th Flaor, 1 Cathedral Raad, Cardiff, CF1 9SD.

Beechams look Cold Care range

A new launch. A new look. A new range that cold and flu sufferers will turn to time and time again.

The new Beechams range has innovative products to meet all your customers' needs. We've even added a new Hot Berry Fruits flavour for Beechams Flu-Plus and launched new Beechams Throat-Plus, a brand new development in sore throat lozenges.

With the backing of a £4 million TV advertising campaign and a massive trade support programme, the new Beechams range will help you make a big, big profit.

So if you want to help your customers and help your business this winter, turn over a new leaf and stock the complete Beechams Cold Care range.

Call us on 0500 888 878 for more information.

Seasonal
Affective
Disorder is a
winter ailment
increasingly
recognised by the
medical
profession.
Michael Ferenczi
PhD discusses the
illness and looks
at its drug-free
treatment

t is rare to see an article about a drugless treatment for a relatively common illness. However, here is a remarkable story of the use of bright lights for treating SAD or Seasonal Affective Disorder.

But first, what is SAD? SAD, sometimes called 'winter depression' or more euphemistically 'winter blues', is a form of depression first characterised in the USA in the early 1980s by a set of atypical symptoms which differentiates it from other types of uni- or bipolar depressions.

The symptoms include a strong seasonal pattern, documented over two years or more, with depressive symptoms appearing at the beginning of autumn and lasting until March, or sometimes late May.

The depressive symptoms are also somewhat unusual: apart from the lack of energy and drive, loss of libido and general feeling of tiredness there often is a marked hypersomnia, and a telltale craving for carbohydrate which is usually accompanied by seasonal weight gain.

These symptoms are sometimes of thought of in terms of a human equivalent to hibernation, but this analogy is at this stage more folklore than science.

Patients diagnosed with SAD are for the most part women (80 per cent), with onset of symptoms in the 20s. However, in the anonymity of a mail order company, customer distribution is much more evenly shared between the sexes.

Some North American studies report an incidence of 15 per cent in the adult papulation. This may be much higher than in the UK, but there is a spectrum of symptoms,

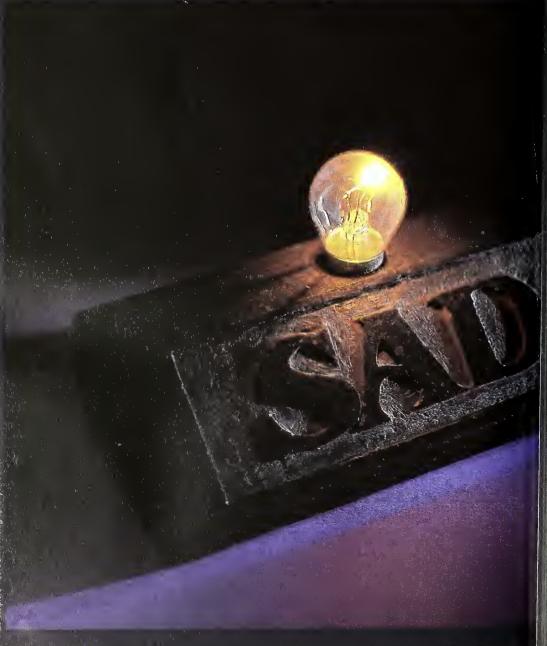

from non-clinical feelings of longing for longer, warmer days to incapacitating depression.

Many studies have been carried out on the epidemiology of SAD. It is found in all temperate climates in both hemispheres, with an incidence that follows the latitude. The closer to the poles, the more common the symptoms are. Scandinavia and Alaska are very prone to SAD, but cases are also reported in Southern California.

A recent study among
Birmingham women has shown
that the UK-born Asian population

was as likely to suffer as the indigenous population, but that the Asians who had spent a significant part of their lives abroad (presumably in more tropical climates) were more at risk of SAD.

For those who can have a holiday break in the sun, the SAD symptoms disappear, only to come back in the following weeks. This, and the seasonality of the symptoms, suggests that SAD is linked to the decreasing amount of daylight, and that replacing daylight with artificial light may have a palliative effect.

SO SAD?

Drs Narman Rosenthal and Al Lewy have experimented with light theropy to determine best characteristics far the lights to alleviate SAD symptoms. Currently, treatment cansists af 30 minutes to 3 haur exposure to bright light every day. The intensity varies from 10,000 lux for the 30 minute treatment to 2,500 lux for the 2-3 hour treatment. Improvements in mood accur within a week, but deteriarate within a few days af cessatian af light therapy.

Light af 10,000 lux is about 10 times brighter than the light level

experienced in a living room at night, and several times brighter than gaad affice lighting, but is still ten times dimmer than the light level experienced on a beach on a bright summer day. It is a light level which appears very bright and intrusive at first, but which is surprisingly easy to get used to.

Light therapy is also quite safe. There have been a few reports of hypomania and headaches induced by light therapy, but these problems are quickly assuaged by reducing the intensity of therapy. No eye-sight problems have been reported, but current practice suggests that 'full spectrum' light, which mimics sunlight, should not be used because of the high UV cantent.

Twa main hypatheses are invaked to explain the mode of actian af light therapy. The first cansiders that light madifies the serotanin pathways, and is supported by the fact that selective serotanin reuptake inhibitars (SSRIs) also alleviate the symptoms af SAD. The secand hypothesis is that SAD is a disruptian af the bialogical clack, the circadian rhythms which determine the patterns af harmane secretian, the sleep/wake cycle, alertness and moods.

In any case, the pineal gland seems to be implicated. This peasized gland at the base af the skull cansists largely af cells which bear striking similarities to the rodshaped phatoreceptors of the retina. In same animals it can be shawn to respand directly to light. In humans, it receives its input from the retina, through the aptic nerve, via the suprochiasmatic nuclei. It is knawn to release the harmane melatonin into the blood stream, but may alsa release hitherto unidentified factors.

The pattern of melatonin secretian is interesting: secretian increases in the evenings, to peak in the middle of the night at 2am to 3am, and decreases again tawards wake-up time. In jet-lag ar adaptatian to shift wark, there is a mis-match between melatonin

secretion and the sleep/wake cycle, which takes about 5 days to readjust. Although melatonin has been used to accelerate recovery from jet-lag, it has no effect on SAD symptoms.

An argument against the view that SAD is a disturbance of the circadian rhythm is the fact that the effectiveness af light therapy does not depend on the time af day when it is administered.

There daes appear to be a biochemical marker of SAD, perhaps a first for the diagnosis of mental health problems. In SAD patients, the depth of melatonin fluctuations, as measured from blood ar saliva samples, appear to be shallawer in winter than in narmal cantrols.

SAD is relatively well accepted among medical practitianers in the UK, but acceptance is not universal. It is also true that the effectiveness af light therapy has never been demonstrated in any true dauble-blind, placebocantrolled study as patients are quite aware of the lights during light therapy: a true placebo is yet to be devised. Hawever, daublecrossover studies now abound, and the case far light therapy in the treatment af SAD appears to strengthen each year.

The fact that it is a drug-free treatment is porticularly appealing to same, especially because af the lack of side effects. Natural daylight is also effective in the treatment of SAD, either through taking halidays in the sun, or by making the most of the available daylight. A study in San Diego, in 'sunny' southern California, shawed that 40-60-year-alds spend less than 1 hour in natural daylight every day! Na wander light theropy is needed.

Lights designed far light therapy are naw relatively easy to find. The important factors to cansider in the chaice of luminaire are: the intensity (10,000 lux should be available at a camfortable distance); the absence of glare – a filament lamp is not appropriate; the absence of UV light (achieved by means of an

acrylic diffuser to absorb UVs produced by fluorescent lamps); the ergonomics; sturdiness and portability of the luminaire; and the price. A VAT exemption form can be signed by the user as luminaires specifically designed for SAD are now VAT exempt in their medical application.

The use of light therapy to treat SAD should be carried out under medical supervision, especially if it is accomponied by drug therapy. In practice, the timing and duratian af expasure to the lights is often left to the patient, who can best find the mast suitable time and place to fit in least abtrusively with their daily routine. Patients do nat need to stare at the lights, as long as they glance at the lights every few minutes.

Headaches and eve-sight problems should call for an immediate halt in light theropy until problems are resolved. Eyeglasses are nat cantra-indicated, but photosensitive lenses that darken in the light are nat suitable, nor are sunglasses. In this respect, it is interesting to cansider that by the age of 60, corneal opocity has reduced light input to the retina by 40%, and sleep disorders in the very elderly may be related to diminished eye stimulation resulting in a lack af daylight entrainment.

For the pharmacist, the supply of light theropy equipment may provide a new and exciting area for sales. A potential problem is the shelf spoce required for their display, which exceeds the space required by mast ather products. Hawever, customer demand is growing, and as a seasonal item, the mood-enhancing light theropy equipment may be of great interest to customers.

A round up of new products and offers

• The new line in the Advil brand is Advil Cold & Sinus from Whitehall Laboratories. Each tablet contains ibuprofen 200mg and pseudoephedrine 30mg to address heodoche, common cold and sinus congestion. Whitehall is positioning Advil Cold & Sinus for year round relief.

The Advil brand is receiving a total of a £5 million spend.

Whitehall Laboratories Ltd. Tel: 01628 669011.

• This season sees a new cough syrup for children from Pfizer Consumer Healthcare. Buttercup Infant Cough Syrup is suitable for children aged one to five years and contains ipecacuanha, menthol and liquid glucose. The GSL product enters o £12 million market of children's cough remedies, of which 90 per cent go through pharmocy, says Pfizer.

Buttercup Infant Cough Syrup is suitable for children aged one to five

Procter & Gamble has reformulated its Vicks Vaposyrup

Medised's sugar-free variant

• Procter & Gamble has reformulated Vicks Vaposyrup so that it gives a soothing sensation as it clings to the throat for longer. Available in chesty and dry cough varionts, P&G soys the new formula will be supported by a £4.6 million (MEAL equivolent) television campaign from November.

Procter & Gamble (HB&C) Ltd. Tel: 01932 896000.

• A new sugar and colour-free variant of the children's cold medicine Medised has been launched by Seton. The launch coincides with a repackaging of the P medicine brand with the new livery clearly distinguishing the original from the new variant.

Seton Healthcare Group plc. Tel: 0161 652 2222.

• Unichem has extended its own brand range with three new cough liquids: Child Chesty Cough Linctus, Adult Chesty Cough Linctus and Adult Tickly Cough Syrup. It has also launched dual action Unichem Medicated Lozenges, to complement its Antiseptic Throat Lozenges.

The cough mixtures are among those included in Unichem's Winter Warmers promotion. This offers 40 'essentiol' products with special discounts of up to 30 per cent, when minimum case quantities are ordered.

Unichem. Tel: 0181 391 2323.

 Weleda has announced the availability of its winter health
 Pharmacy-only trade parcel. The package includes five Pharmacyonly lines in the nine cold and flu products. POR of up to 44 per cent is possible depending on parcel size. Interested pharmocists should contact Weleda Direct on 01159 448222.

Weleda (UK) Ltd. Tel: 01159 9448200.

Next month sees the launch of Redoxon Double Action, which Roche claims "works twice as hard at boosting your immune system", as it contains vitamin C and zinc. The £2m television launch will be supported with POS material.

Roche Consumer Health. Tel:

Roche Consumer Health. Tel: 01707 366000.

• Seven Seas is promoting its new Haliborange Effervescent Vitamin C Plus Multivitamins tablets for the winter season. Lounched in September, the brand is being supported with a £1m advertising spend and promotional campaign including a sampling programme throughout the winter.

Seven Seas Health Care Ltd. Tel: 01482 375234.

 Monmouth's Expulin cough medicine range is included in the company's promotion offering 50 per cent POR margin with all Monmouth pharmocy OTC products.

Monmouth Pharmaceuticals. Tel: 01483 565299.

 The Care cold remedy range from Thornton & Ross is being supported by a consumer leaflet 'Care for your family's coughs and colds', POS material and the Care product information file.

Thornton & Ross Ltd. Tel: 01484 842217.

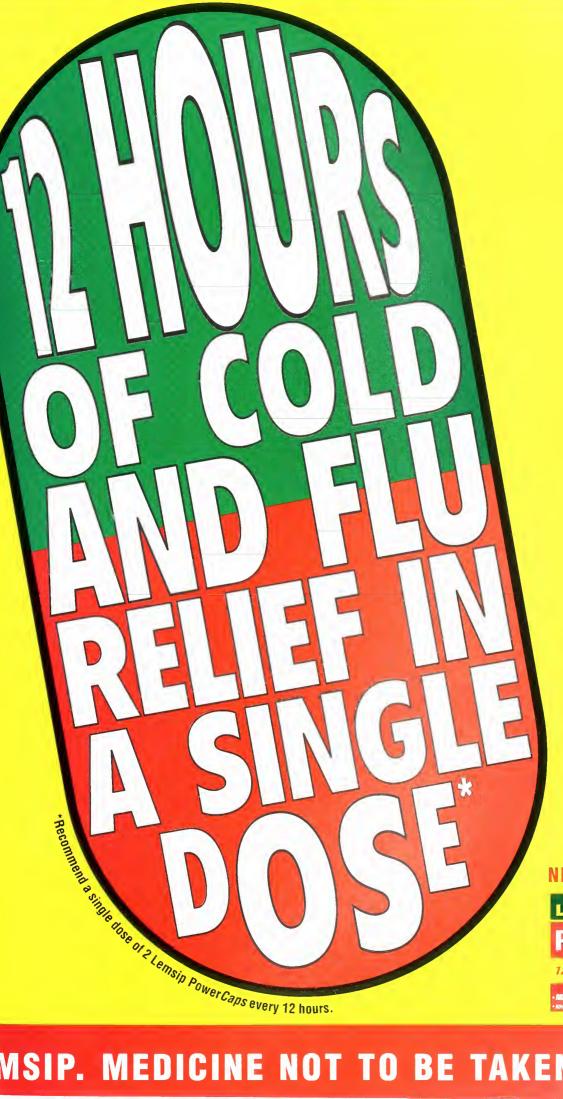

Redoxon Double Action will be launched next month

LEMSIP POWERCAPS ESSENTIAL INFORMATION

Active Ingredients: Ibuprofen Ph Eur 300 mg and pseudoephedrine hydrochloride BP 45 mg. Indications: For the relief of symptoms of heavy cold and influenza, including relief of aches and pains, headache and sore throat, relief of nasal congestion or a runny nose, lowering of temperature. Dosage Instructions: Adults and children 12 and over: two capsules. Swallow whole with water. Do not chew. The dose may be repeated after 12 hours. No more than two doses in 24 hours. Contraindications: Severe coronary heart disease. Severe hypertension. Current receipt, or receipt within the last two weeks, of therapy with monoamine oxidase inhibitors. Active peptic ulceration. Hypersensitivity to ibuprofen, pseudoephedrine or any other ingredient. Hyper-sensitivity reactions to ibuprofen, aspirin or any other NSAID, including asthma, angioedema, urticaria or rhinitis precipitated by these drugs. Children under 12 years. Precautions and Warnings: The decongestant effect increases gradually after the first dose and may continue for up to 15 hours after the last dose. To be used with caution by patients with hepatic or renal dysfunction. Ibuprofen - to be used with caution by patients who are asthmatic May increase prothrombin times in patients receiving anti-coagulants and may reduce the effects of diuretics. Pseudoephedrine - to be used with caution by patients with hypertension, heart disease, hyperthyroidism, hyperexcitability, phaeochromocytoma, prostatic enlargement, closed angle glaucoma or diabetes. May adversely interact with antihypertensive agents or tricyclic antidepressants or other sympathomimetics, such as nasal decongestants, appetite suppressants or amphetamine-like psychostimulants, to cause a rise in blood pressure. Pseudoephedrine may partially reverse the hypotensive action of drugs which interfere with sympathetic activity, such as bethanidine or methyldopa. If symptoms do not improve after three days, consult your doctor. The product should be used in pregnancy only if the benefits outweigh any possible risk. Side-Effects: Ibuprofen - may precipitate bronchospasm and induce asthma attacks in susceptible patients. Unwanted effects are uncommon in short-term use at low doses. They may include dyspepsia, gastrointestinal intolerance and bleeding, skin rashes. Thrombocytopenia and agranulo-cytosis have very rarely been reported. Pseudoephedrine - adverse reactions are uncommon, but dry mouth, anorexia, urinary retention in men, skin rashes and symptoms of CNS excitation such as tension, restlessness, sleep disturbance or hallucinations may occur rarely. Retail Price: 10, £2.99. Marketing Authorisation: 0063/0098. Supply Classification: Pharmacy medicinal product. Holder of Marketing Authorisation: Reckitt & Colman Products Limited, Dansom Lane, Hull, HU8 7DS. Date of Preparation: 2 September 1997. Lemsip Power Caps and the sword and circle symbol are trademarks.

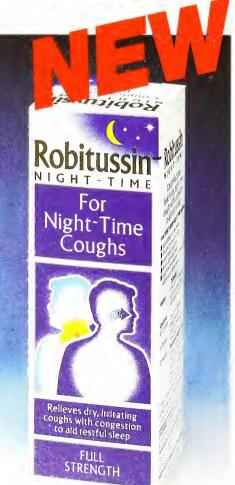

NEW FROM LEMSIP

MSIP. MEDICINE NOT TO BE TAKEN LIGHTLY

There's no stoppin's Robitussin.

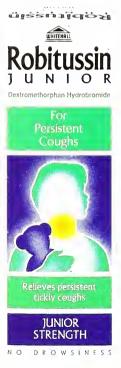

Robitussin* is *still* increasing its turnover rate. Up another 20.4%[†] on last year's sales, **Robitussin** is in a challenging position for the No.1 growth brand.

The launch of **Robitussin** *Night Time*, proves Whitehall's commitment to this full strength pharmacy brand.

So make sure you are well stocked with **Robitussin** this winter. You may find there's no stoppin' the tills ringin'!

Who makes what: a unique source list

This C&D Generics Supplement not only lists the seven-digit PIP Codes, but also provides buyers with a unique source list for unbranded lines in pack sizes ranging from counter and dispensary to small-scale manufacture.

The list is arranged so that users can trace alternative suppliers easily, and at the same time have the relevant PIP Code for ordering and product identification. Entries are updated in the weekly Price List Supplement when changes are notified to C&D by manufacturers. C&D would be pleased to receive details in writing, of any packs not currently listed and for which codes are required.

As far as possible, the following compilation rules have been observed:

1. In converting from six to seven digit PIP code, a zero has been placed before the old number, thus retaining the existing check digit.

- 2. New PIP Codes are allocated randomly as under the six figure system and start with "1".
- 3 . In the interest of continuity, priority in re-allocation of existing codes has been given to suppliers whose products carry the PIP Code on their packs.
- 4. Entries are generally under pharmaceutical name in order to bring all suppliers together for maximum buyer choice. However, counter packs will often be labelled with a popular synonym (eg Gee's linctus, Whitfields ointment). A cross-reference has been provided whenever products are shown under a synonym in suppliers' lists.
- 5. The "DT" symbol indicates Drug Tariff pack sizes.

The PIP Code

History

The benefits of a common code for pharmacy products have been long recognised, and over the years various working parties recommended the creation of such a code. In 1982 the National Pharmaceutical Association, in conjunction with Benn Publications (publishers of *Chemist & Druggist*), created the PIP Code in which they now hold joint copyright. This move had the support of several major pharmaceutical wholesalers.

Definition

The PIP Code is a product identifying number which has been allocated to goods distributed through pharmacies. All types of products are included and every pack size and colour or other variation has its own unique PIP Code number. The codes are published alongside each product entry in the *Chemist & Druggist* monthly Price List and weekly supplements, ensuring that a readily accessible and up to date PIP Code reference is widely circulated.

Initially, a six-digit code was chosen for ease of keyboard entry, but demand for the PIP coding system has necessitated the introduction of a seven-digit code. The last of these digits is a check digit (see p5) to minimise errors in recording.

Uses

The individual computer systems operated by manufacturers, wholesalers and retailers can be interfaced to recognise the PIP Code, which therefore provides a common language. This enables the retailer to retain a freedom of choice of supplier and makes it possible for all involved in the distribution chain to benefit from streamlining their communications and merchandise handling systems.

Initially the PIP Code was used mainly as an interface between retailer and supplier for the purpose of placing and receiving orders, and virtually all pharmaceutical wholesalers can now recognise PIP Code when transmitted electronically. However, within retail pharmacy it is used increasingly for stock control and point-of-sale data capture. Most computer bureaux handle PIP Code data for clients, and many EPoS and dispensary systems make use of the PIP Code facility.

Computer users who choose to adopt the PIP Code as the primary code for their systems can avoid the time and expense of maintaining their own database. This is a considerable advantage to smaller businesses and pharmacies which have only limited clerical resources.

Developments

Requests for further information on the Code's use, details of data formats etc. and licence applications should be addressed to:

Mr Brian Dosser, FCA PIP Code Administrator National Pharmaceutical Association Mallinson House 40-42 St. Peter's Street St. Albans Herts AL1 3NP Tel: 01727 832161

PIP Code principles

The Pharmaceutical Interface Products Code Regulatory Authority is the National Pharmaceutical Association, which takes advice from a technical panel representing retail and wholesale PIP Code users, plus *Chemist & Druggist* (who maintain the NPA's master PIP Code file).

The code is based on computer codes used to maintain the C&D Price Service but has been augmented to incorporate a number of product categories not considered appropriate for publication in the C&D monthly Price List (such as some watches, confectionery, stationery).

Code users may find the following points of policy helpful:

General

- 1. Manufacturer and distributor codes are published in Section 2 of the C&D monthly Price List.
- 2. Within the seven-digit PIP Code, codes have been reserved for users' own requirements(see para 12), but some wholesalers have allocated part of the series to "service" items such as bags and bottles. Retailers should obtain details of such allocation from their usual suppliers before using this series as dump codes etc.
- 3. Discontinued items are deleted from the *C&D* Price List upon notification by the manufacturer but remain on the master file for reference. If a product is re-marketed by the same supplier within that period, every effort is made to use its former code.
- 4. Where there are minor adjustments to pack sizes the existing code is generally retained to help retailers monitor sales performance. When the trade unit alters there is no requirement to issue new codes.
- 5. Both branded and generic product codes can be issued in advance of product launch with full security and confidentiality. The allocated numbers are reserved on the *C&D* computer pending advice of launch. Manufacturers of ethicals are particularly asked to use this facility so that codes can be notified on their standard letter to wholesalers. Intercontinental Medical Statistics (IMS) and *Chemist & Druggist* have available a joint form (approved by ABPI and BAPW) for prior allocation of both SDA and PIP codes.

Variants

- 6. Products which have no variants (colour, flavour, etc.) are identified by a separate "main" code for each pack size, representing singles wherever possible. This code appears immediately before the trade price column in the *C&D* Price List.
- 7. Where products include variants the "main" code does not appear instead there are individual codes in italic type beneath the entry. However, the "main" code is allocated to a variant (e.g. neutral, normal, white, original, small etc) in order to reduce confusion for code users.
- 8. Where variants are added to an existing range the "main" code will normally be retained as the variant code for the original version. If this variant is subsequently discontinued its code will remain the "main" code but will no longer be published.

Special cases

9. PIP codes for unbranded products are shown in the *C&D* Generics Reference Book, distributed free to all *C&D* subscribers, additional copies are available on request. This supplement also lists wholesalers accepting PIP Code for ordering purposes, Generic Suppliers and Disallowed Dressings and Appliances section.

Note: Branded generics (ie, where a prescription calling for the brand name alone is sufficient to identify absolutely the product required) are to be found in the C&D Monthly P. L.

N122/ICC PIPCODE V1234JU

- 10. Certain surgical/sundries groupings are at present not fully covered by PIP Code. This applies particularly to products where the multitude of size and type variations is great and/or product developments are frequent, so that retailers are likely to rely on manufacturers' product number or full description for ordering from a wholesaler. However, some of the more standard and frequently prescribed brands and generic items (eg many NHS appliances) are coded in the *C&D* Price List and the Generics Supplement. With the introduction of a seven-digit PIP Code the product areas covered by PIP Code will be extended as soon as possible.
- 11. Products normally restricted to hospitals are indicated in the Price List with HP. Products are coded if manufacturers anticipate them being prescribed to out-patients.
- 12. Promotional, temporary and seasonal packs are not coded: retailers should use the 900-0000 series, and wholesalers use the 800-0000 & 700-0000 series.

Check-digit calculation

The check (seventh) digit of the PIP Code is arrived at by the following calculation:

- 1. Take each digit starting with units position then tens position and so forth and multiply by 2,1,2,1,2,1, etc.
- 2. Add up resultants of 1. (Add the digits not the products ie if resultant is two digits then add them together).
- 3. Subtract the figure at 2 from the next highest multiple of 10.
- 4. Answer is the modulus 10 check digit. If no remainder then check digit is zero.

To check

- 1. Take each digit (including check digit) and multiply by 2,1,2,1,2.1 (starting in units position).
- 2. Total resultants as before.
- 3. Answer should be an exact multiple of 10.

Example

 $\begin{array}{r} 3 \quad 5 \quad 8 \quad 9 \quad 2 \quad 5 \quad \text{(original number)} \\ x \ 1 \ x \ 2 \ x \ 1 \ x \ 2 \ x \ 1 \ x \ 2 \quad \text{(multiplicands)} \\ = \quad 3 \quad 10 \quad 8 \quad 18 \quad 2 \quad 10 \quad \text{(resultants)} \\ = \quad 24 \quad \quad \text{(sum of digits} \\ 3 + 1 + 0 + 8 + 1 + 8 + 2 + 1 + 0) \\ 30 - 24 \quad \quad \text{(subtract from next multiple of 10)} \\ = \quad 6 \quad \quad \text{(this result is the modulus 10 check digit)} \end{array}$

Check

3 5 8 9 2 5 6 (PIP code number) 3 10 8 18 2 10 6 (resultants) = 30 (sum of digits) = 0 (correct - exact multiple of 10)

Coding queries

Coding queries related to products published or to be published in the C&D Price List and Generics Reference Book should be addressed to Colin Simpson, Price List Controller, Chemist & Druggist, Miller Freeman Plc, Sovereign Way, Tonbridge, Kent TN9 1RW (telephone 01732 364422).

Queries relating to codes held on the master file should also be addressed to Colin Simpson at the above address.

Matter of policy should be referred to Brian Dosser, PIP Code Administrator, National Pharmaceutical Association, Mallinson House, 40-42 St. Peters Street St. Albans Herts AL1 3NP (telephone 01727-832161) from whom, for NPA members printouts of the master file in alphabetical or numerical order may be purchased. Non-members can apply to C&D direct.

The PIP Code copyright is owned jointly by Miller Freeman Plc (publishers of *Chemist & Druggist*) and the National Pharmaceutical Association.

Technical panel

The PIP Code technical/consultative panel, set-up by the National Pharmaceutical Association to advise it on code maintenance and development, is chaired by Mr Brian Dosser of NPA and has the following members: Michelle Styles (NPA information department), Ron Salmon (Consultant to *Chemist & Druggist*), Colin Simpson (C&D Price List Controller, responsible for maintaining the PIP Code master file, the issuing of PIP Codes and their publication through C&D Price Service) Brian Hopkins (a community pharmacist), Andrew Charlesworth (representing Numark Ltd), Clive James (representing AAH Pharmaceuticals), David Farrow (representing Unichem plc)

Setting the Price Standard for the Industry

079-5930

049-5903

DT

Our prices are so keen - across the board - that, our customers tell us, many of our competitors don't quote their own prices any more but simply ask what price **Freeman** is quoting!

Proof, if proof were needed, that Freeman Pharmaceuticals is the true market leader! So, to guarantee that you are consistently buying at the best possible price - and benefiting from the added-value of our superb customer service, our speed of delivery and our fantastic incentives for loyal customers - you only need to ring one (free) number:

For additional products requiring PIP-Codes, please contact C&D Price List. Tel: 01732 364422.

Our aim is to provide the best possible service to all our customers.

This means:

Offering a wide variety of ways in which to order via regular visits form our representatives you calling us using freephone $\theta 800\ 373\ 573$ us calling you when and as frequently as you wish.

Training our staff to be knowledgeable, efficient and helpful so that problems or queries can be dealt with, with the minimum of fuss.

Offering extended open hours to increase the opportunity for you to talk to someone not a machine.

opening hours are: 8.30am to 7.00pm Monday to Friday and 8.30am to 6.00pm Saturdays.

And always offering the best value for money on all your product requirements.

Keeping paperwork simple to save time.

DISALLOWED DRESSINGS AND APPLIANCES

A guide to both proprietary and non-proprietary items for which payment will not be made if dispensed against NHS prescriptions issued in England and Wales. Derived from the lists used by the PSNC Prescription Research Centre it includes extensive cross-referencing for quick access to particular products.

Prescribing Information

Presentation: Preservative free inhalation solution of Ipratropium Bromide BP 250mcg in 1ml or 500mcg in 2ml. Use: For the treatment of reversible airways obstruction. Dosage and administration: Adults: 0.4-2.0ml solution (100-500mcg) up to 4 times daily. Children: 0.4-2.0ml solution (100-500mcg) up to 3 times daily. Elderly: There is no specific information on the use of ipratropium bromide nebuliser solution in the elderly. Route of administration: By inhalation from a suitable nebuliser or from an intermittent positive pressure ventilator. If it is necessary to dilute the solution, sterile sodium chloride solution 0.9% should be used. Contra-indications: Known sensitivity to atropine or to any ingredients of Ipratropium Bromide 250mcg/ml Inhalation Solution, Warnings: Use of the nebuliser solution should be subject to close medical supervision during initial dosing due to reports of paradoxical bronchospasm associated with its administration. Patients should be warned not to allow the mist or solution to enter the eyes, particularly in those patients who may be susceptible to glaucoma. Caution is advised in the use of anticholinergic agents in patients with prostatic hypertrophy. Patients should be warned not to drive or operate machinery if dizziness or blurred vision occur. Pregnancy and lactation: During pregnancy, only use when the expected benefit is thought to outweigh any possible risk to the foetus. Avoid if breast-feeding as data on excretion of ipratropium bromide in breast milk is not available. Adverse effects: Occasionally dry mouth may occur. Urinary retention and constipation have been reported rarely. Legal category: POM. PL Number: 14641/0001. Distributor: Bartholomew Rhodes Ltd., Brixworth, Northampton NN6 9DO. Package quantity and basic NHS cost: 250mcg/1ml: 20 ampoule carton £6.75, 60 ampoule carton £20.25; 500mcg/2ml: 20 ampoule carton £7.95, 60 ampoule carton £23.85.
